

Fig. S8. Jaggedness indices across healthy control subjects (CTR), patients infected with chronic hepatitis B virus (HBV) and patients with hepatocellular carcinoma (HCC). (A) Jaggedness index deduced using all fragments without size selection. (B) ROC curves for jaggedness index between fragments within a range of 130 to 160 bp and without size selection. The y-axis indicates the jaggedness index utilizing the filling of unmethylated cytosine (JI-U).
