

Description of Additional Supplementary Files

File Name: Supplementary Data 1

Description: Candidate positively selected genes. List of one-to-one gene orthologs between the two muntjac species with Yang-Nielsen¹⁷ dN/dS values of 1.5 or more. Putative gene names were extracted from the BLAST+ (v2.6.0)¹⁸ best hit to the *H. sapiens* proteome from UniProt¹⁹. For cases where the best hit disagreed between *M. muntjak* and *M. reevesi*, both hits were noted.
