Supplementary Table 1

Association of CD163 with risk factors or medication in patients.

		CD163 ¹	
		Median (IQR)	p-value
Gender	Male	0.84 (0.38-1.86)	0.080
	Female	0.59 (0.29-1.40)	
Smoking	No	0.72 (0.37-1.80)	0.68
	Yes	0.81 (0.29-1.65)	
Diabetes	No	0.75 (0.32-1.63)	0.59
	Yes	0.70 (0.38-1.79)	
Anti-hypertensive	No	1.18 (0.41-1.61)	0.30
	Yes	0.69 (0.32-1.77)	
Statins	No	0.71 (0.38-2.44)	0.31
	Yes	0.75 (0.32-1.63)	

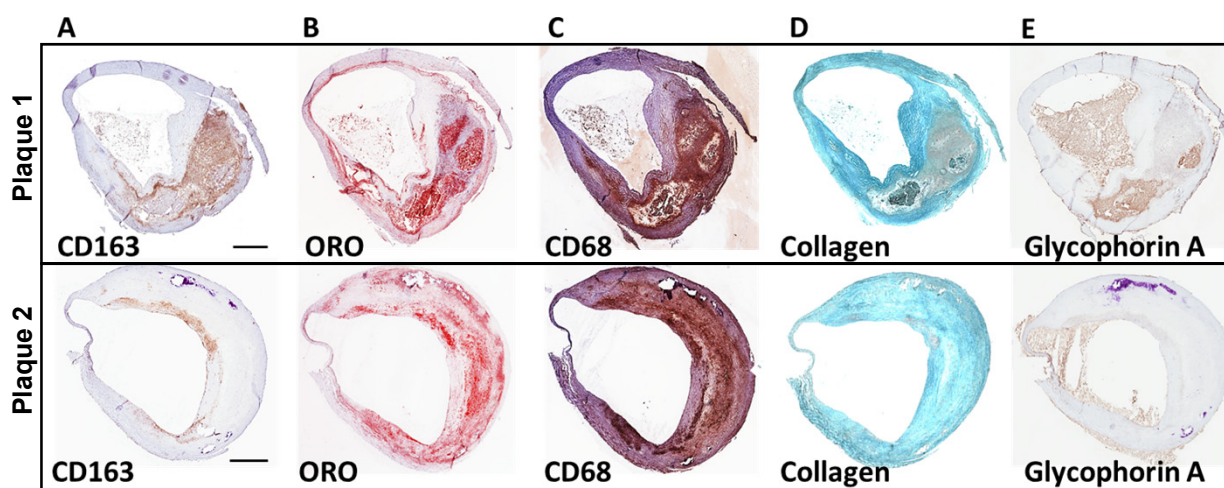

¹CD163 (% of plaque area) is presented as median (IQR).

Supplementary Table 2

Spearman rank correlations coefficients between CD163 expression in plaques and cardiovascular risk factors in patients.

	CD163	
	r	p-value
Age	0.099	0.17
Body mass index	-0.084	0.24
<i>Fasting lipoproteins</i>		
Total cholesterol	-0.059	0.43
LDL cholesterol	0.017	0.82
HDL cholesterol	-0.14	0.062
Triglycerides	0.0001	1.00
eGFR	-0.092	0.20
CRP	0.009	0.90
White blood cell count	0.026	0.72

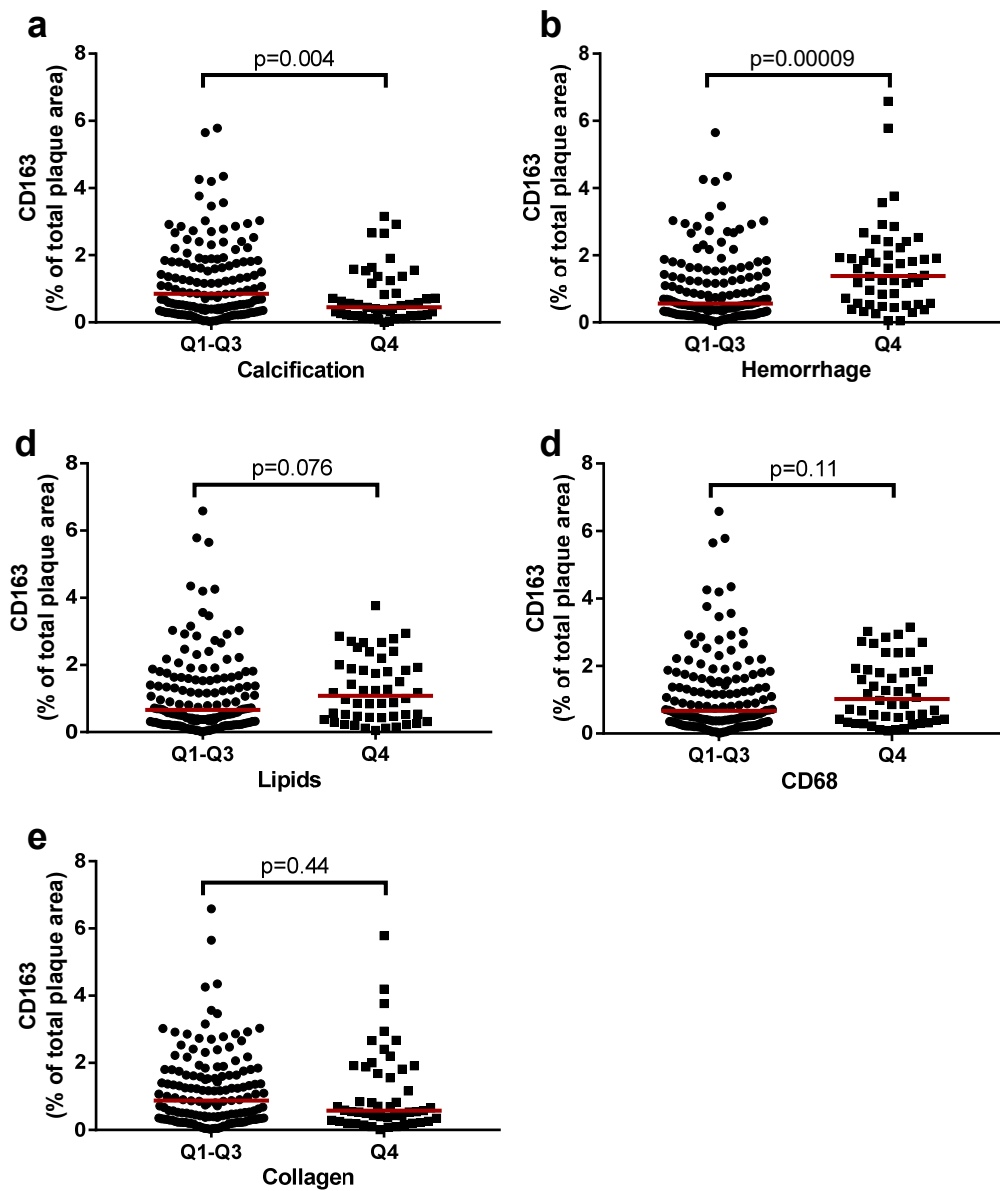

eGFR (estimated glomerular filtration rate), CRP (high sensitivity C-reactive protein).

Supplementary figure 1.

Human plaques stained for CD163 (a), lipids (Oil red O) (b), CD68 (c), collagen (d), and glycophorin A (e). Representative images for two different plaques are shown.

Scale bars = 1 mm.

Supplementary figure 2.

CD163 protein expression in plaques enriched in calcification (a), hemorrhage (b), lipids (c), CD68 (d), or collagen (e).

CD163

CD206

CD11c

Supplementary figure 3a.

Human carotid plaque stained for CD163, CD206, and CD11c.
Scale bars are 1 mm (whole plaque) or 100 μ m (magnified part of plaque).

CD163

CD206

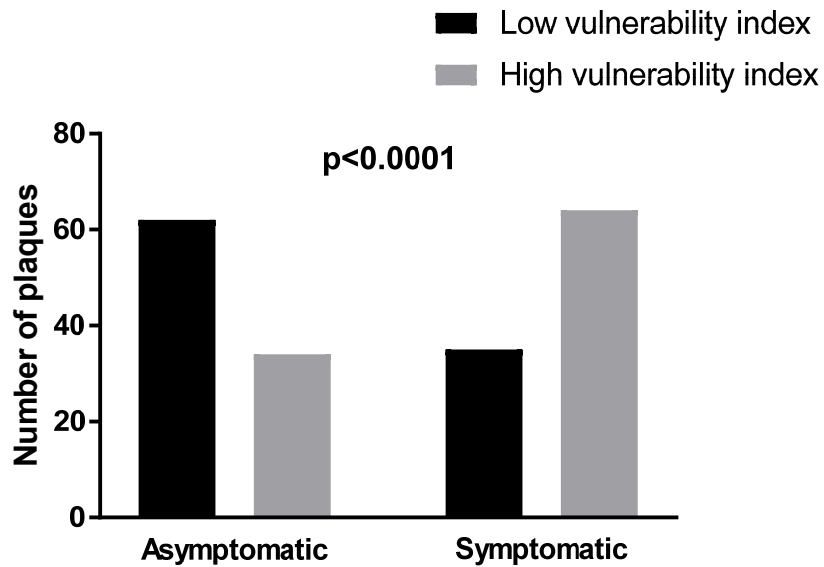

CD11c

Supplementary figure 3b.

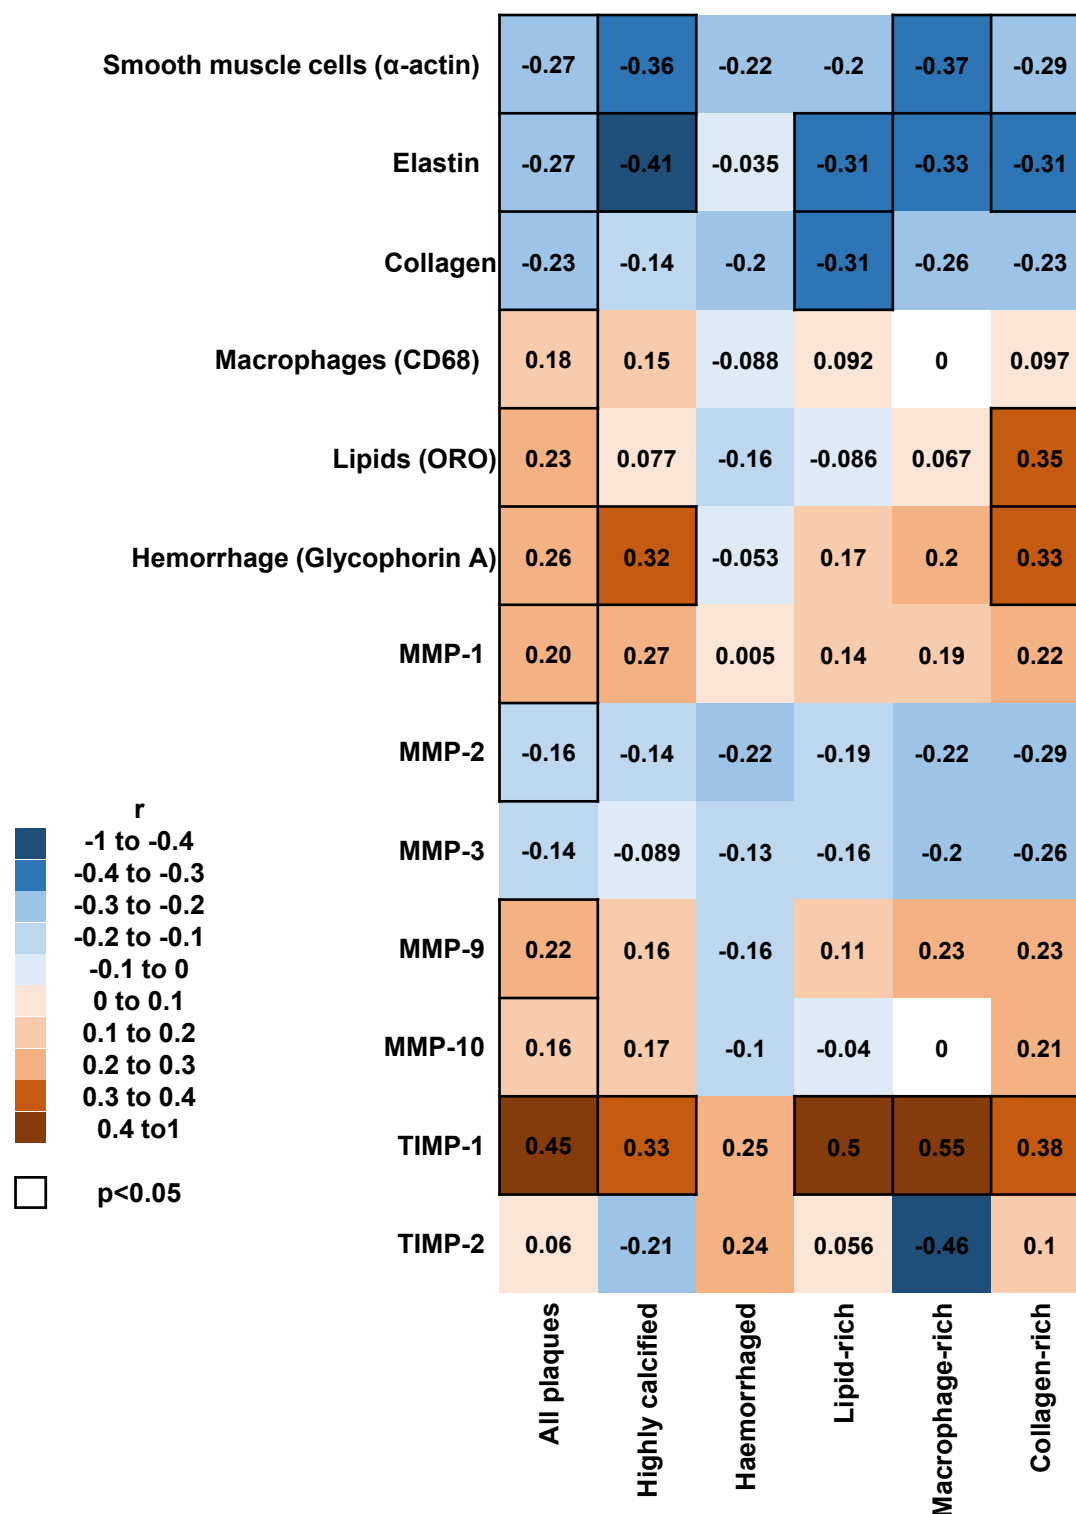

Human carotid plaque stained for CD163, CD206, and CD11c.

Scale bars are 1 mm (whole plaque) or 100 μ m (magnified part of plaque).

Supplementary figure 4.

Plaques from symptomatic patients have increased plaque vulnerability. The vulnerability index was determined by the sum of lipids (Oil Red O), macrophages (CD68), and hemorrhage (glycophorin A) divided by the sum of collagen (Movat pentachrome) and SMCs (α -actin).

Supplementary figure 5.

Correlations between CD163 protein expression and plaque structural components, MMPs, and TIMPs in human carotid plaques rich in calcium, hemorrhage, lipids, macrophages and collagen. Spearman correlation coefficients (r) are shown in color coded squares. Statistically significant correlations ($p < 0.05$) are marked with a border.
