

Reviewer 1, v.1

Comments to the Author

Dear authors

I would like to congratulate with all of you for the letter and the program to start helmet CPAP in your country and hospital.

I have only few minor comment:

1) may you provide numbers of patients that you treated to date, with your success rate?

2) in the literature, there is evidence to attempt also prone position during CPAP (see for example the Italian paper recently published - PMID: 32386886). Was it considered as treatment option? please discuss it.
