Supplemental Table S1. Realtime PCR primer sequences

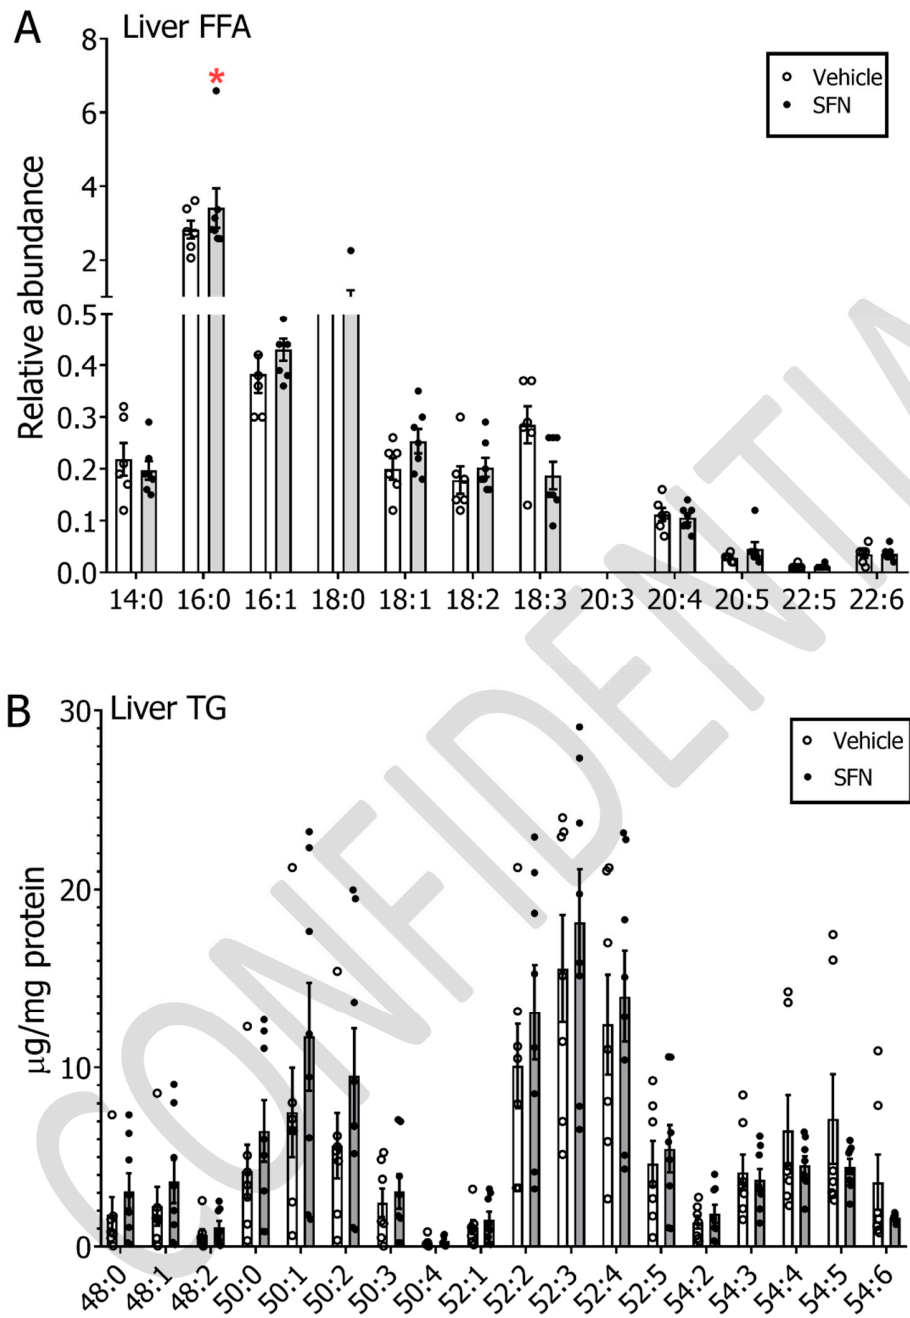

Supplemental Figure S1. Representative images of expression of Ki-67 and ER α in mammary tumors. Images present n=3 per group. Scale bar = 50 μ m.

CONFIDENTIAL

Supplemental Figure S2. Untargeted lipidomics on serum collected from E2-implanted rats that were either gavaged with Vehicle (DMSO) or SFN. All samples included for this analysis were collected after the active DMSO/SFN gavage period and includes both mammary tumor-bearing and non-bearing rats. Values are mean \pm SEM (n=8 per group). ****p<0.0001 (Student's t-test) compared to DMSO.

Supplemental Figure S3. A) Free fatty acid (FFA) and **B)** triglyceride (TG) quantification of livers from E2-treated rats that were gavaged with Vehicle (DMSO) or SFN. All samples included for this analysis were collected after the active DMSO/SFN gavage period and includes both mammary tumor-bearing and non-bearing rats. Values are mean \pm SEM (n=12 in DMSO group and n=9 in SFN group). *p<0.05 (Student's t-test).

Supplemental Figure S4. mRNA expression profile in liver tissue between Vehicle (DMSO) and SFN-treated rats. All samples included for this analysis were collected after the active DMSO/SFN gavage period. *Gapdh* used as housekeeping control. Values are mean \pm SEM (n=7 in DMSO group and n=3 in SFN group). *p<0.05 (Student's t-test).
