

Figure S6: *Tg(Xla.Eef1a1:mlsEGFP)* in reciprocal crosses. Related to Figure 3. (A) *Tg(Xla.Eef1a1:mlsEGFP)* fluorescence was monitored in reciprocal crosses of ABTL and *Tg(Xla.Eef1a1:mlsEGFP)* parents. (B) Mean fluorescence was quantified 1dpf by FACS analysis of digested embryos. Results are from three independent experiments; error bars represent one standard deviation. *** $P < 0.001$ as compared with respective controls.

A *mlsEGFP* is a maternal and zygotic transgene

B *mlsEGFP* knockdown with StCsm(*EGFP*) in crosses with ABTL
