

Supplemental Table S1. Scoring of the chronic lesions in individual renal tissue compartments

Tissue compartment ^a	Score			
	0	1	2	3
Glomerulosclerosis (GS score)	<10%	10-25%	26-50%	>50%
Interstitial fibrosis (IF score)	<10%	10-25%	26-50%	>50%
Tubular atrophy (TA score)	<10%	10-25%	26-50%	>50%
Arteriosclerosis (CV score)	Intimal thickening < thickness of media	Intimal thickening \geq thickness of media		

^a The GS score includes the percentage of glomeruli with global and segmental sclerosis and ischemic glomeruli; IF and TA score includes the percentage of renal cortex involved by interstitial fibrosis and tubular atrophy, respectively; CV score includes the severity of arteriosclerosis determined by the extent of thickening of the intima.
