

Supplementary Material to “Inflammatory lesions and brain tumors: is it possible to differentiate them based on texture features in magnetic resonance imaging?”

Additional file 1. Complete list of patients with inflammatory lesions including their ages, gender, and diagnostic evaluation.

Patients	Age	Gender	Edema	Diagnosis	Confirmation
1	40	M	Marked	Toxoplasmosis	Biopsy
2	59	F	Marked	Cryptococcosis	Biopsy
3	20	F	Marked	Moderate neuromyelitis	CFS
4	56	F	Marked	Neurocysticercosis	*
5	45	F	Marked	Pyogenic abscess	Biopsy and culture
6	43	F	Marked	Aspergillosis	Biopsy
7	62	F	Marked	Aspergillosis	Biopsy
8	15	F	Mild	Multiple sclerosis	Dissemination in time and space + CSF analysis
9	41	F	Mild	Septic emboli	Clinical and radiological correlation and radiological evolution
10	37	F	Marked	Tuberculosis	Biopsy
11	37	M	Marked	Toxoplasmosis	Biopsy
12	5	M	Marked	Pyogenic abscess	Biopsy and culture
13	41	F	Marked	Toxoplasmosis	Biopsy
14	32	F	Marked	Neurocysticercosis	*
15	32	F	Marked	Toxoplasmosis	Biopsy
16	45	F	Mild	Neurocysticercosis	*
17	56	M	Marked	Progressive multifocal leukoencephalopathy	Biopsy

Patients	Age	Gender	Edema	Diagnosis	Confirmation
18	25	M	Mild	Septic emboli	Clinical and radiological correlation and radiological evolution
19	24	F	Mild	Multiple sclerosis	Dissemination in time and space + CSF analysis
20	52	M	Mild	Toxoplasmosis	Biopsy
21	41	F	Mild	Toxoplasmosis	Biopsy
22	43	M	Mild	Pyogenic abscess	Biopsy
23	18	F	Mild	Multiple sclerosis	Dissemination in time and space + CSF analysis
24	29	F	Mild	Cryptococcosis	CSF
25	44	F	Mild	Toxoplasmosis	Biopsy
26	42	M	Mild	Toxoplasmosis	Biopsy
27	33	M	Mild	Tuberculosis	CSF
28	36	F	Mild	Tuberculosis	CSF
29	65	M	Marked	Tuberculosis	Biopsy
30	53	F	Marked	Vasculitis	Biopsy

*Single or multiple active parenchymal cysts, with at least one cyst with scolex on MRI.
