Supplemental Table 3. Analyses of variance, parameter estimates and fit diagnostics of regression analyses carried out on SAS University Edition, using a stepwise approach. For the regression models (summarized in Table 3), the frozen-thawed sperm viability (freezability score) of bulls was set as the dependent variable and abundances of seminal plasma proteins with the highest VIP scores (as shown in Figure 2), as the independent variables. Q9BGI1L and P29392L: log-transformed abundances of peroxiredoxin-5 (accession # Q9BGI1) and spermidhesin-1 (accession # P29392), respectively. P81019 and P81019L: abundances and log-transformed abundances of BSP5 (accession # P81019).

Data Set	WORK.IMPORTPLAN4ANDLOG
Dependent Variable	FreezeScore
Selection Method	Stepwise
Select Criterion	SBC
Stop Criterion	SBC
Effect Hierarchy Enforced	None

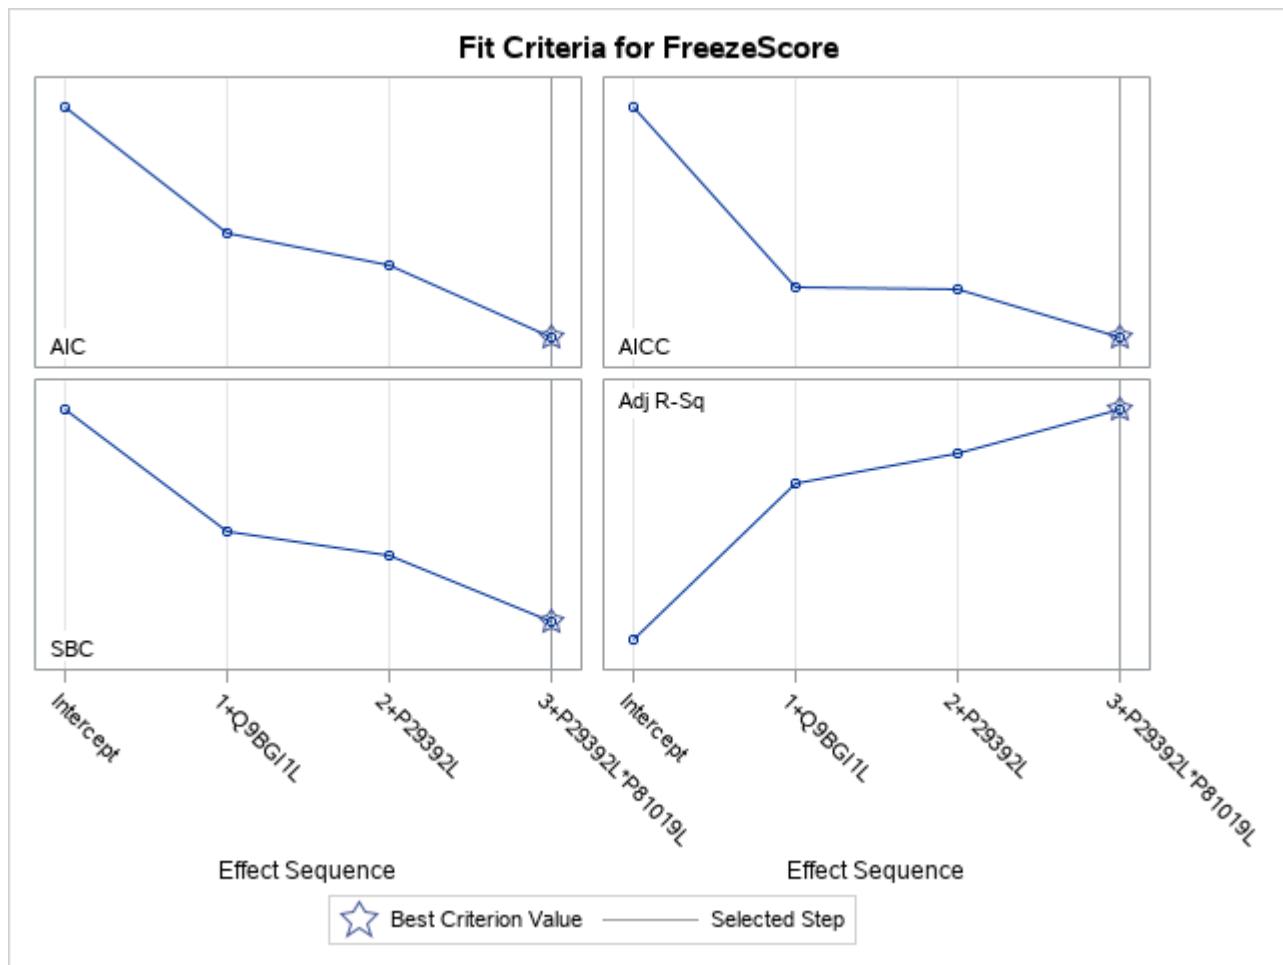

Number of Observations Read	14
Number of Observations Used	14

Dimensions	
Number of Effects	4
Number of Parameters	4

Stepwise Selection Summary				
Step	Effect Entered	Effect Removed	Number Effects In	SBC
0	Intercept		1	50.0757
1	Q9BGI1L		2	42.0419
2	P29392L		3	40.5569
3	P29392L*P81019L		4	36.1779*

* Optimal Value of Criterion

Selection stopped because all effects are in the final model.

Selected Model

The selected model is the model at the last step (Step 3).

Effects: Intercept P29392L Q9BG1L P29392L*P81019L

Note: The p-values for parameters and effects are not adjusted for the fact that the terms in the model have been selected and so are generally liberal.

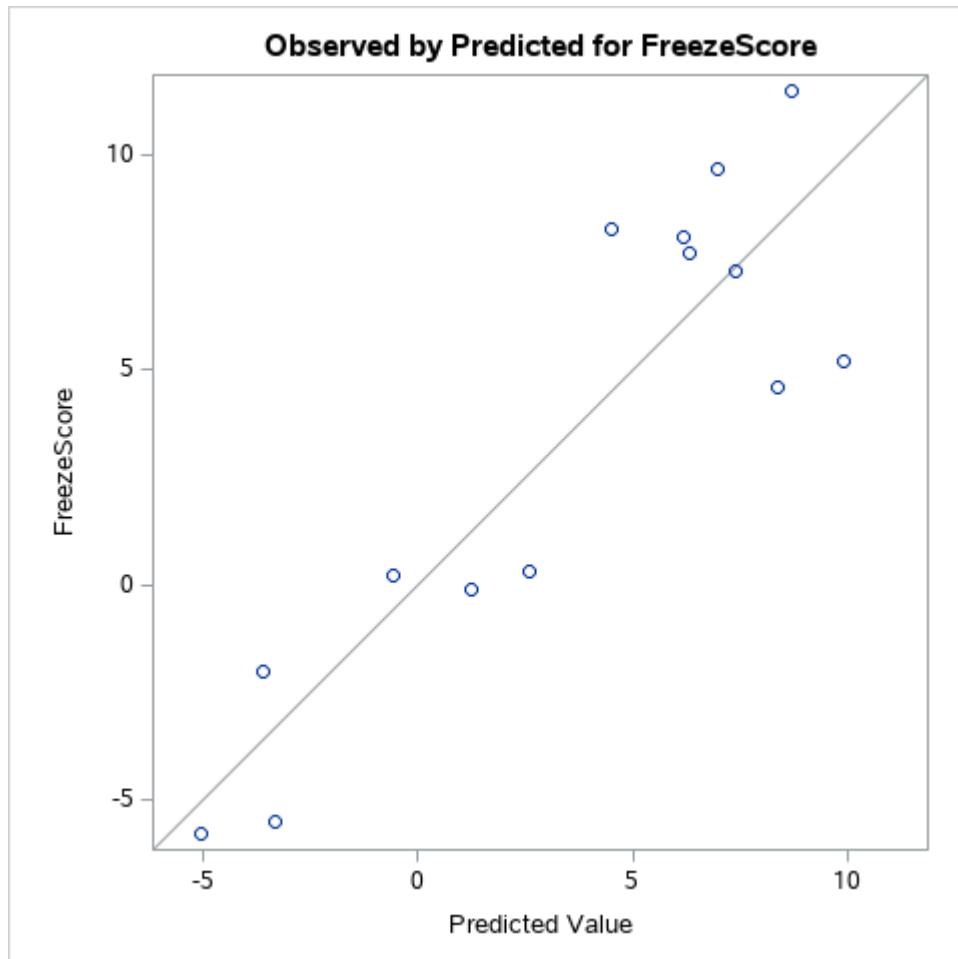

Analysis of Variance					
Source	DF	Sum of Squares	Mean Square	F Value	Pr > F
Model	3	327.34750	109.11583	12.50	0.0010
