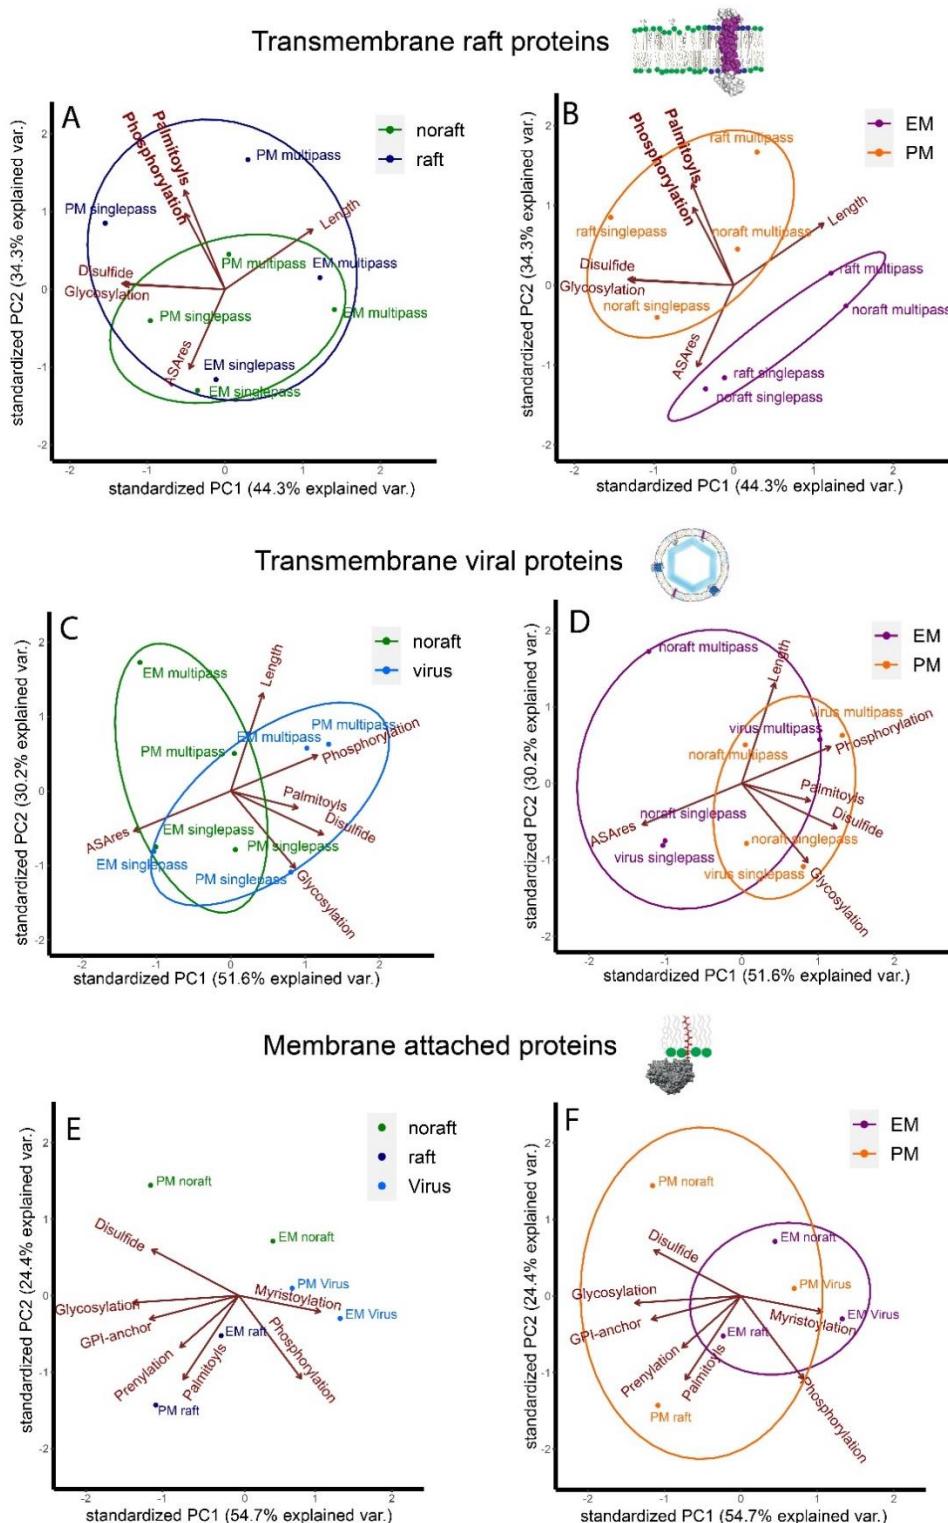

Figure S1 Principal component analysis on the fraction of modified proteins in transmembrane (A,B,C,D) and attached membrane proteins (E,F), in raft versus non-raft (A,B) and virus versus non-raft (C,D) proteins. After PCA, proteins are colored upon protein type in the left column (green=non-raft, dark blue=raft and light blue=viral) or cellular localization in the right column (orange=plasma membrane and purple=endomembranes).
