

Supplementary Appendix

Supplementary Table 1 – Multivariable logistic regression analysis for the primary endpoint (in-hospital all-cause mortality or ICU admission).

	OR_{adj}	95% CI	p-value
Pulmonary hypertension	4.98	1.24-19.94	0.023
Age (years)	1.03	0.98-1.08	0.206
Male sex	2.49	0.65-9.62	0.184
CXR severity score ≥ 4	11.90	2.49-56.81	0.002
High-sensitivity troponin T (ng/L)	1.00	0.98-1.01	0.724
PaO ₂ /FiO ₂ on hospital admission	0.99	0.99-1.00	0.052

Data are presented as OR_{adj} and 95% CI. The C-statistic for the multivariable model is 0.889, the Hosmer-Lemeshow goodness-of-fit test p-value is 0.978.

CI – confidence interval; CXR – chest X-ray; ICU – intensive care unit; OR_{adj} – adjusted odds ratio.
