Comments to the Author

A great case series study and shed the light on a potential drug against COVID-19 infection. Overall, well written manuscript.

1) Please in the introduction the following article: (Malek et al. "Doxycycline as a potential partner of COVID-19 therapies" PMID: PMC7298522).

2) It would be better to have the inflammatory markers progression after doxycycline was started in each case at baseline and on the following days, if available. Small table for the 4 cases should be fine and informative to the readers of the journal.
