

Figure S1. Distribution of reported travel destinations visited by participants across the four study sites. Destinations are listed in order of most populous (Guayaquil) to least populous (Rural Communities). Note the “Rural Communities” encompasses any rural area surrounding a given study site not just the rural village study location.

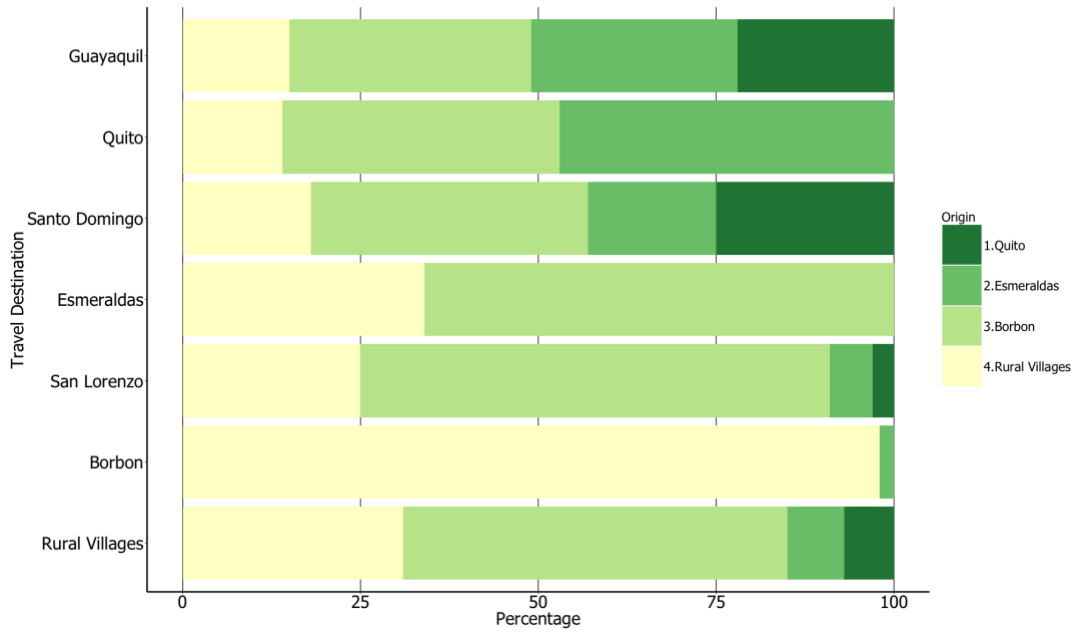

Figure S2. Reported Domestic Travel Destination by Study Site. Only destinations specified on the survey instrument are shown, but only 3% reported traveling to "Other" destinations. Note that reported travel to "rural villages" for Quito and Esmeraldas is not necessarily to the same rural villages as the rural study site.
