

S2 Fig. Tumor 1.

Quantification of (A) relative total spheroid area, (B) relative spheroid number, and (C) relative average spheroid size, with error bars indicating standard error of the mean. Quantified mutant subpopulations are plotted (D) with error bars indicating standard deviation. Only *KRAS* G12D mutant subpopulations were detected. An example of spheroid culture appearance is provided (E), in which the scale bar is 200 μm in length.
