74 **Figure S2.** Kinetic traces at 475 nm monitoring dopaminochrome formation upon the reaction of soluble
75 $\text{NH}_2\alpha\text{-Syn-Cu(II)}$ (10 μM ; black), $\text{NAc}\alpha\text{-Syn-Cu(II)}$ (10 μM ; red), and free Cu(II) (10 μM ; gray) with dopamine
76 (2 mM). Dopamine (2 mM) auto-oxidation is shown in pink. (b) Kinetics traces at 475 nm to monitor
77 dopaminochrome formation upon the reaction of soluble and membrane-bound $\text{NH}_2\alpha\text{-Syn-Cu(II)}$ (10 μM ;
78 black and blue, respectively) and $\text{NAc}\alpha\text{-Syn-Cu(II)}$ (10 μM ; red and green, respectively) with dopamine (2
79 mM). The kinetic traces upon reaction of free Cu(II) and Cu(II) in lipids are shown in gray and brown,
80 respectively. Dopamine (2 mM) auto-oxidation in buffer and in the presence of lipids are shown in pink
81 and purple, respectively. (c) Specific dopamine oxidase activities determined by quantifying the
82 dopaminochrome formed after the reaction of $\alpha\text{-Syn-Cu(II)}$ (10 μM) or free Cu(II) (10 μM) with dopamine
83 (2 mM), for 10 min for soluble forms and 2 min for membrane-bound forms ($\epsilon_{475}=3,700 \text{ M}^{-1}\text{cm}^{-1}$).
84 Calculated specific dopamine oxidase activities in nmol dopaminochrome* $\mu\text{mol } \alpha\text{-Syn-Cu(II)}^{-1} \text{ min}^{-1}$: $\text{NH}_2\alpha\text{-}$
85 Syn-Cu(II) : 6.5 ± 0.8 ; $\text{NAc}\alpha\text{-Syn-Cu(II)}$: 6.6 ± 0.9 ; free Cu(II) : 10.9 ± 1.9 ; mem $\text{NH}_2\alpha\text{-Syn-Cu(II)}$: 149.6 ± 11.5 ;
86 mem $\text{NAc}\alpha\text{-Syn-Cu(II)}$: 146.4 ± 20.2 ; lipids+ Cu(II) : 84.1 ± 13.2 .
