

Figure S2. PBMCs from 4 subjects were treated with either 0, 6.25 or 25 μ g/mL omiganan for 30 minutes prior to stimulation with 50 μ g/mL polyI:C (panel A), 1 μ g/ml imiquimod (panel B), 2.5 μ g/mL ssRNA40/lyovec (panel C) or 2.5 μ M CpG class C (panel D) for 24 hours. IFN α was quantified in cell supernatant (individual data, mean of duplicate culture + SD).
