

Description of Additional Supplementary Files

File Name: Supplementary Data 1

Description: The supplementary data file contains costs, CO₂ emissions changes and installed capacity information that are derived from output of the cost optimization model used in this paper. The columns denote numerous different scenarios discussed in detail in the manuscript and Supplemental Information at varying renewable penetration levels (from 0 to 80%). The rows correspond to the costs, CO₂ emissions and installed capacity for India in these scenarios at the various renewable penetration levels.
