

Scenarios where publications were split into sub-studies (demographics must be reported separately in publication):

1. Controlled and free-living data collected from two different sets of subjects
 - a. Block (2017) x2
 - b. Kooiman (2015) x2
 - c. Lee (2015) x2
 - d. Rowe (2019) x2
 - e. Thorup (2017) x2
2. Two different activity paradigms conducted on two different sets of subjects (ex. overground ambulation with a group of subjects and treadmill ambulation with a subset of that group)
 - a. Battenberg (2017) x2
 - b. Huang (2016) x2
3. Single activity paradigm conducted on distinct groups of subjects with outcomes reported by group
 - a. Different health statuses [Appelboom (2015) x2]
 - b. Different chronic injury [Fulk (2014) x2]
 - c. Different age groups [Modave (2017) x3]
