

**Supplementary Figure S1: Normalized read counts.**

Log<sub>2</sub> of normalized read counts after next generation sequencing of both pre-imatinib (Pre1, Pre2) and post-imatinib (Post1, Post2) populations.

**Supplementary Figure S2: Gene set enrichment analysis of entire gene rank.**

GSEA was performed using the GSEA Preranked module as described in materials and methods.

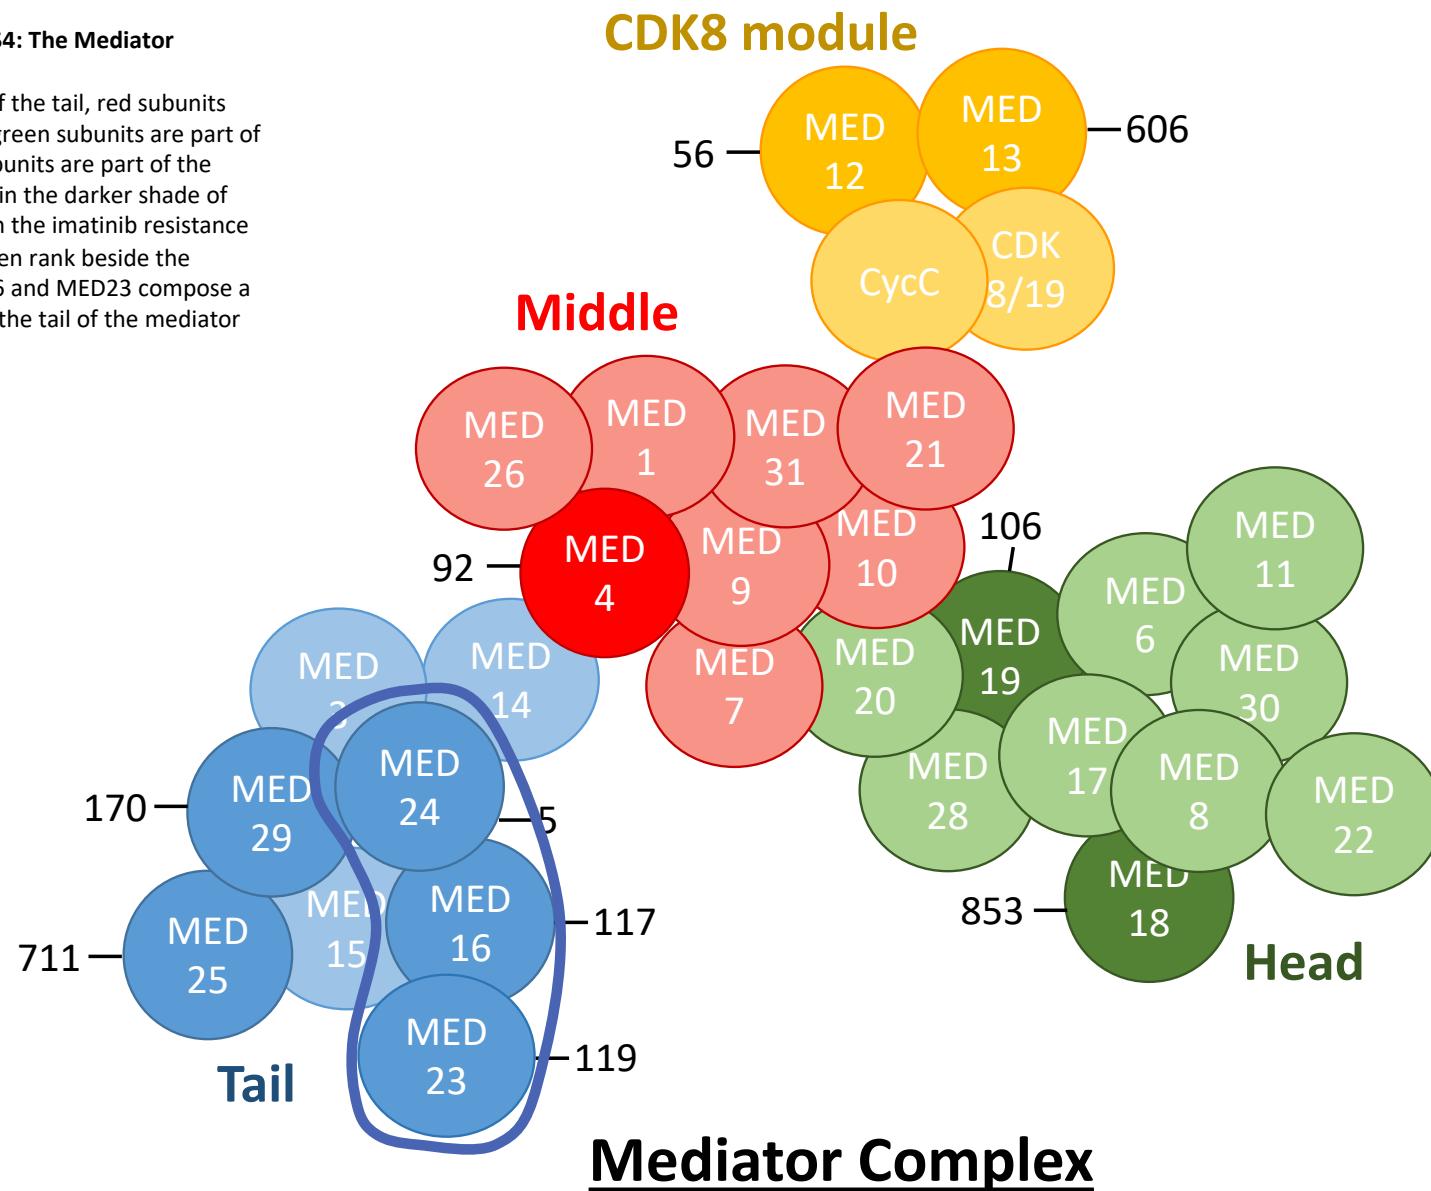

**Supplementary Figure S3: Intrinsic apoptosis and genes enriched in CRISPR screen.**

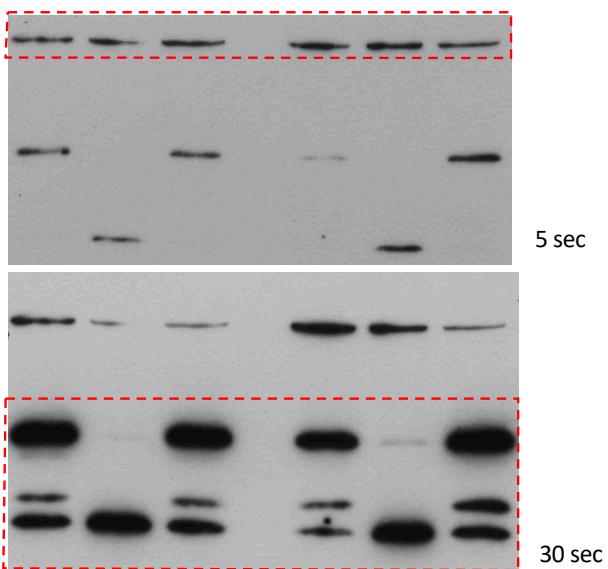

Proapoptotic proteins are classified into two subclasses, those that are enriched in the imatinib resistance screen (light blue, FDR < 0.5) and those that are not (dark blue, FDR > 0.5). In control cells, cellular stress or BH3-mimetic treatment dislodges anti-apoptotic proteins from proapoptotic proteins, allowing cytochrome release and apoptosis. Similar phenotypes are observed in BIM KO cells. However, less apoptosis is observed in response to cellular stress or BH3-mimetic treatment in BAX KO cells. BAX seems essential for MOMP formation and cytochrome c release.

**Supplementary Figure S4: The Mediator complex**

Blue subunits are part of the tail, red subunits are part of the middle, green subunits are part of the head and yellow subunits are part of the CDK8 module. Subunits in the darker shade of the color are enriched in the imatinib resistance screen. The CRISPR screen rank beside the subunit. MED24, MED16 and MED23 compose a tight-knit submodule in the tail of the mediator complex.

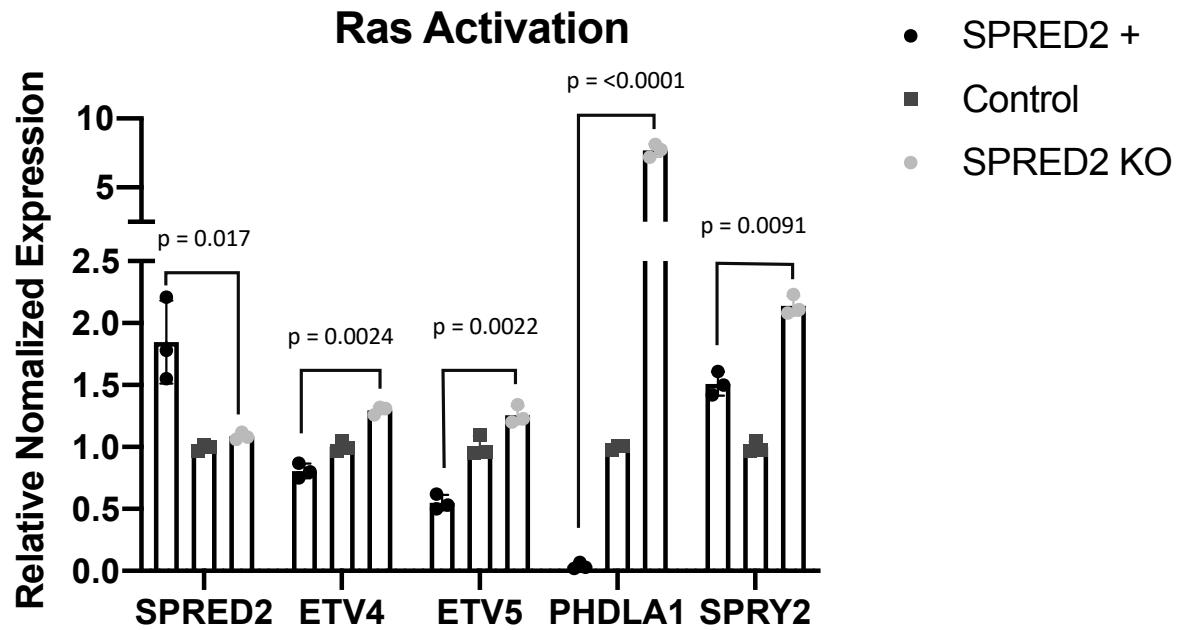

**Supplementary Figure S5: Uncropped western blot analysis.**  
Top uncropped image was used for figure 4b to show actin staining (dotted red line). The bottom uncropped image was used for figure 4b to show BIM(EL, L and S) staining. Both images originate from same gel.

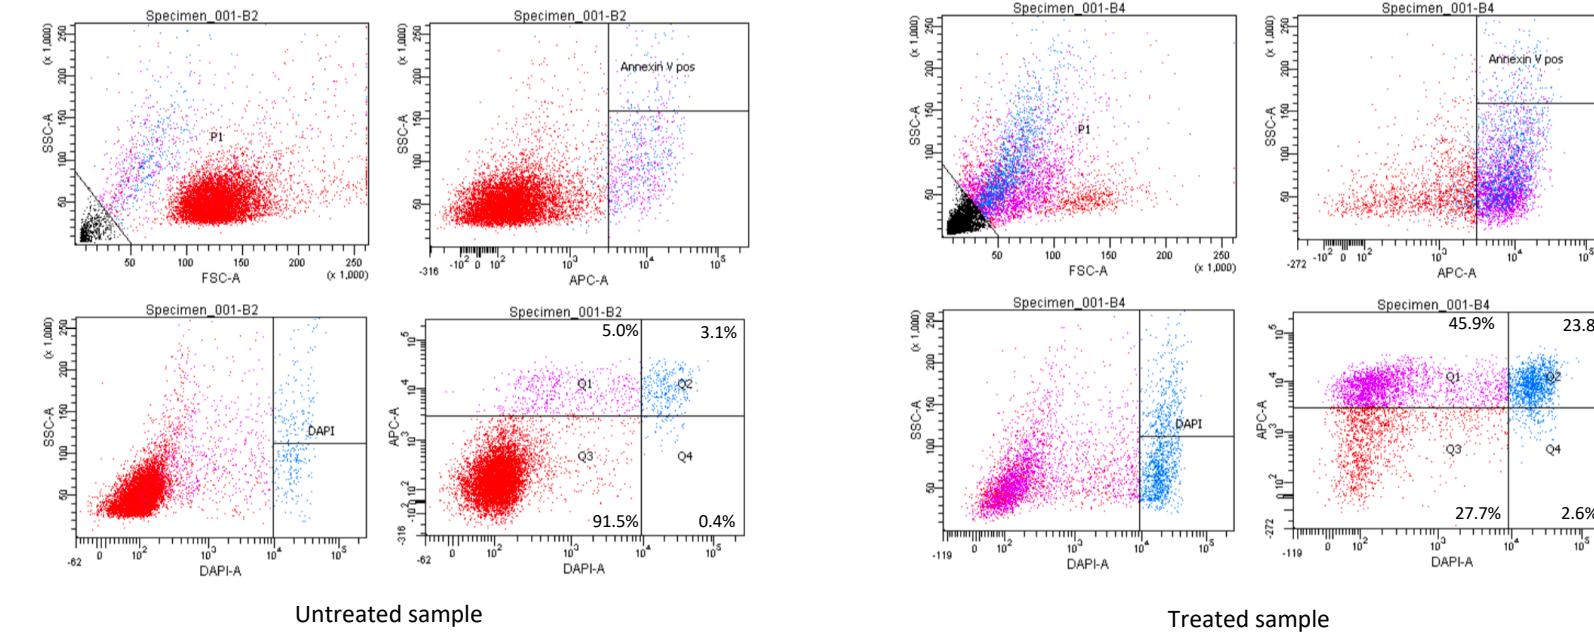

### Supplementary Figure S6: Ras activation via RT-qPCR

Ras activation in SPRED2 KO cells was confirmed by RT-qPCR analysis. Statistical analysis performed on GraphPad, Student's two tailed unpaired t-tests were performed, n = 3 biological replicates

### Supplementary Figure S7: FACS representative plots

Plots and gating strategy is shown. The % of DAPI+ cells was added to the % of Annexin V+ cells to calculate the overall % apoptosis. P1 (total population), DAPI (Dapi stained cells) and Annexin V pos (annexin V positive cells).
