Supplement figure 1. Correlations between the CSF CCL24, CXCL7 level and CSF protein concentration, CSF cell count, CSF VDRL titer and serum RPR titer. CSF Protein concentration, CSF cell count, CSF VDRL titer, and serum RPR titer are plotted against CSF CCL24 (A, B, C, D) and CXCL7 levels (E, F, G, H). Each circle represents one individual. The straight line in each graph is the result of linear regression analysis. Spearman correlation analysis was performed, and Spearman's correlating coefficients r and p values are shown. RPR, rapid plasma reagin; VDRL, Venereal Disease Research

Laboratories.
