

Title: Prediagnostic Concentrations of Circulating Bile Acids and Hepatocellular Carcinoma Risk: REVEAL-HBV and HCV Studies

Authors: Jessica L. Petrick, Andrea A. Florio, Jill Koshiol, Ruth M. Pfeiffer, Baiyu Yang, Kelly Yu, Chien-Jen Chen, Hwai-I Yang, Mei-Hsuan Lee, Katherine A. McGlynn

Supplemental Table S1.....	2
Spearman correlation coefficients for bile acids ¹ among included controls from the REVEAL-HBV and REVEAL-HCV cohorts.	
Supplemental Table S2.....	3
Multivariate adjusted odds ratios (OR) and 95% confidence intervals (CI) for the associations between bile acid scores and hepatocellular carcinoma among participants of the REVEAL-HBV and REVEAL-HCV cohorts.	
Supplemental Table S3.....	4
Multivariate adjusted odds ratios (ORs) and 95% confidence intervals (CIs) for the associations between bile acid concentration quartiles and hepatocellular carcinoma among participants of the REVEAL-HBV and REVEAL-HCV cohorts, excluding those below the lower limit of quantitation.	
Supplemental Table S4.....	8
Multivariate adjusted odds ratios (ORs) and 95% confidence intervals (CIs) for the associations between bile acid concentration quartiles and hepatocellular carcinoma among participants of the REVEAL-HBV and REVEAL-HCV cohorts, excluding those diagnosed with hepatocellular carcinoma within 5 years of the study baseline.	

Supplemental Table S1. Spearman correlation coefficients for bile acids¹ among included controls from the REVEAL-HBV and REVEAL-HCV cohorts.

¹Models with categories of <5 cases are suppressed.

²Unconditional logistic regression, adjusted for age (5-year categories), sex, baseline cirrhosis status, and HBV DNA copies at baseline (<10,000, 10,000-<1,000,000, ≤1,000,000), smoking status, HbeAg (negative, positive), alcohol habit (no, yes), BMI (continuous), and education level.

³Conditional logistic regression, adjusted for matching factors (age (5-year categories), sex, baseline cirrhosis status, and HCV-RNA-positive rate), smoking status, alcohol habit (no, yes), BMI (continuous), education status, and HCV genotype.

⁴P-value for trend calculated using the Wald test.
