

Supplemental Figure 2

Supplemental Figure 2. Liver transaminase levels. Mice ($n=4/\text{arm}$) were given a single dose of Free CPT-11 (15 mg/kg), Liposomal CPT-11 (15 mg/kg), PEG-[SN38]₄ (10 mg/kg), or PEG-[SN22]₄ (10 mg/kg). Liver enzymes (AST, ALT) levels were measured at 4, 24, and 72 h time points. Liver function is normal, although there are transient elevations of ALT and AST at 4 hr in the free CPT-11 group, and at 72 hr in the liposomal CPT-11 group.
