

Figure S1. Changes in body weight in the mice for the xenograft model (A) and for the metastatic model (B). (C) The HCCLM3 cell lines overexpressing miR-875-5p and control to be injected into the tail vein were subjected to RT-qPCR to detect miR-875-5p expression level. (D) The miR-875-5p expression in lung metastatic nodules was detected by RT-qPCR. (E) The miR-875-5p expression in HCCLM3 cells transfected with miR-875-5p along or accompanied by eIF3a overexpression plasmid was determined by RT-qPCR. * $P < 0.05$. *** $P < 0.001$.
