Supplementary Materials for  
**A CRISPR-Cas12a-based specific enhancer for more sensitive detection of  
SARS-CoV-2 infection**

## 6 Supplementary Figures

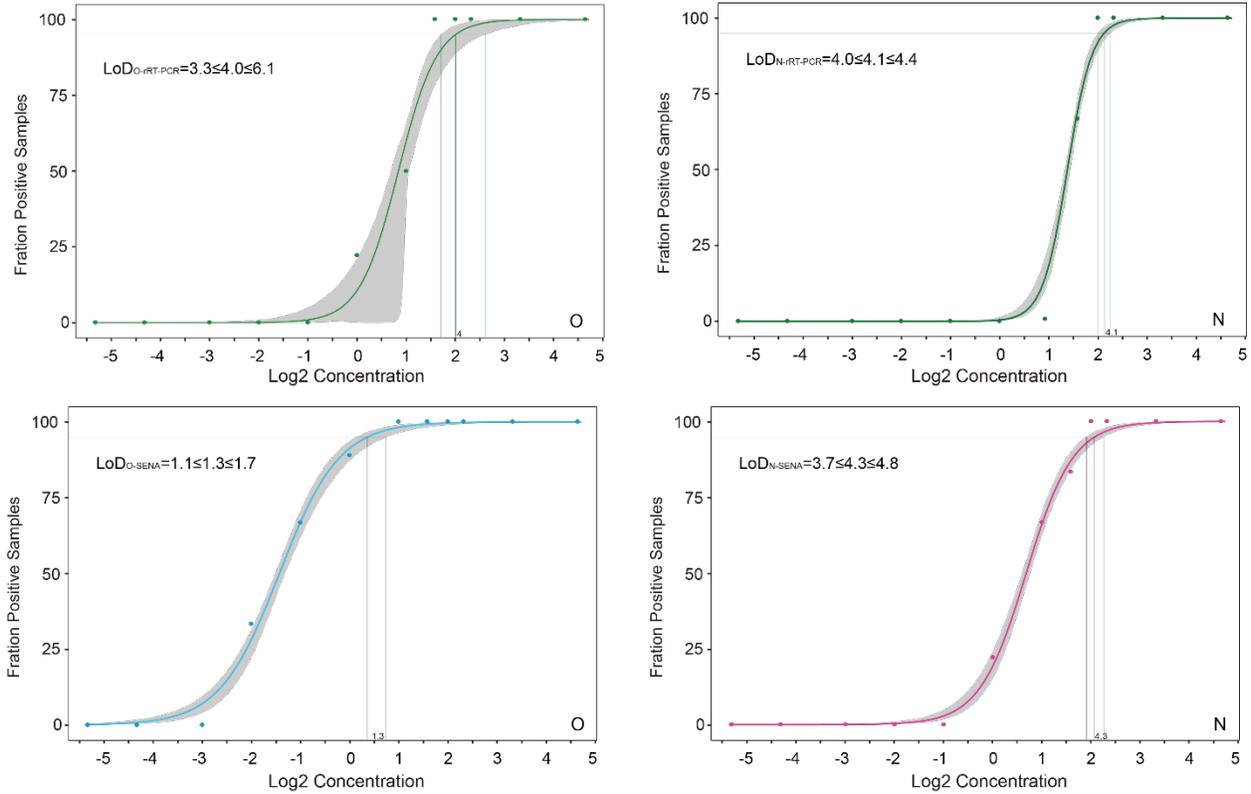

7  
8 **Fig. 1.** Systematic titration of serially diluted SARS-CoV-2 standard RNA templates detected by  
9 rRT-PCR followed by SENA. The design of this experiment is illustrated in detail in Materials  
10 and Methods 4. All the resulted readouts are listed in Supplementary Table 2 and are plotted in  
11 this figure for individual tests being numbered with each of the concentration of the templates used  
12 as marked in the bottom X-axis. The very top horizontal row of the panel matrix is the test of rRT-  
13 PCR with Ct values detected via fluorescence of FAM (● for *O* gene), VIC (▲ for *N* gene) and  
14 both, respectively. In case  $Ct \geq 45$ , *i.e.*, no fluorescence signal of PCR amplification could be  
15 detected, the corresponding symbols were shown in grey (● or ▲). The vertical lists from the  
16 second row of the panel matrix represent the SENA reagent used for the detection: O-SENA (■),  
17 N-SENA (◆) and mix-SENA (★). The parameters of SENA detection are shown from the second  
18 top row to the bottom row as slope-5 min, FC-5 min, FC-10 min and FCratio-10 min/5 min

19 (abbreviated as *FCratio*), respectively and are all marked on their corresponding Y-axis. The rRT-  
20 PCR amplicons are all subject for NGS for verification (Supplementary Table 2).

25 **Fig. 2.** Determination of the LoD values with 95% CI for both rRT-PCR (O-Ct and N-Ct, both  
26 green dots) and SENA (N-FCratio, pink dots; and O-FCratio, blue dots) based on the systematic  
27 titration (Materials and Methods 4.4). All the experimental and analytical details are described in  
28 the text.

30

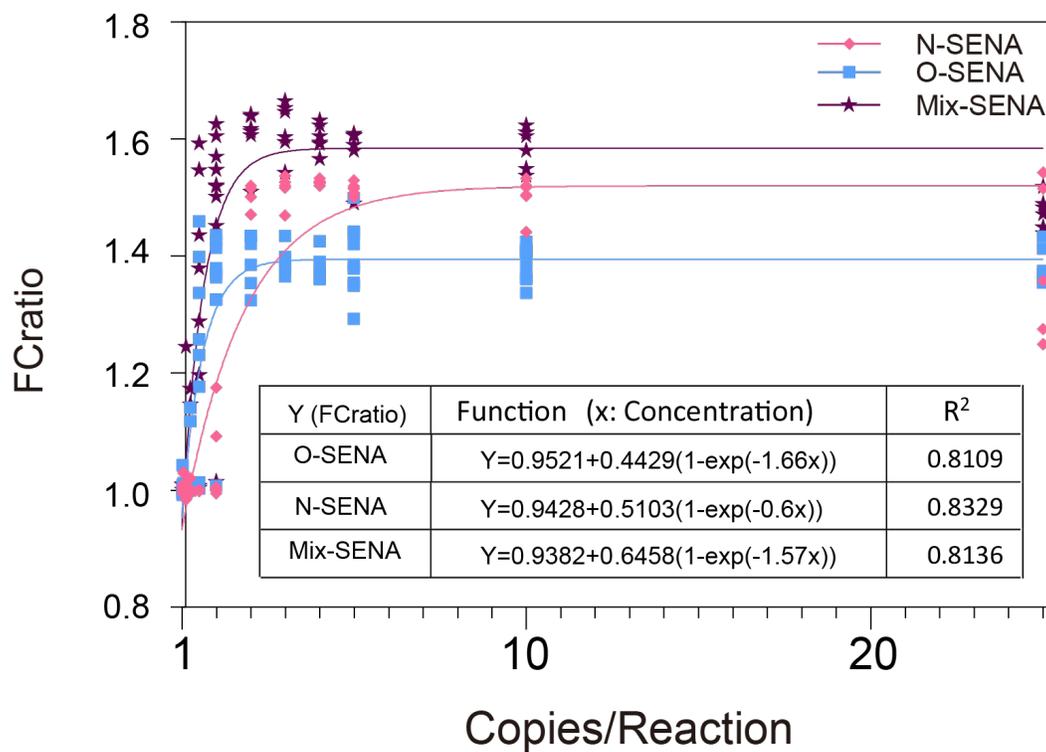

31 **Fig. 3.** Linear regression (a) of the Ct values (● for *O* gene and ▲ for *N* gene) corresponding to  
 32 the rRT-PCR titration experiment. The regression function for Ct (*O*) is:  $Y=38.94-4.198*\log(x)$   
 33 ( $R^2=0.7126$ ) and the regression function for Ct (*N*) is:  $Y=39.05-3.776*\log(x)$  ( $R^2=0.7662$ ), Panel  
 34 b is the residue plot for these two regressions.

54 **Note:**

55 <sup>a</sup>The nucleic acid sequences complementary to the guide sequences are shown in italic and the bold sequences were  
56 complementary to the direct repeats (DR) of LbCas12a crRNA. The underlined sequence was complementary to the  
57 T7 promoter, and thus, able to be aligned with the T7 promoter to initiate the T7 RNA polymerase catalyzed *in vitro*  
58 transcription to synthesize the designed crRNA.

59 <sup>b</sup>crRNAs prepared with the oligo nucleotides listed in this table specifically target the rRT-PCR amplified gene  
60 fragments of *O, E* or *N* in SARS-CoV-2, designed by the suppliers (labelled in the parenthesis) of individual  
61 commercial kits based on the standards of WHO, Chinese CDC or itself.

93 Note: N/A, Detection of this gene that was not supported by the kit. "+", Positive; "-", negative; /, PCR product was not analyzed by NGS. Samples in aquamarine background stood for SENA  
94 negative but rRT-PCR positive or uncertain diagnosis. Samples in red background stood for SENA positive but rRT-PCR negative or uncertain diagnosis.
