

Supplementary Figure 1. Morphological observation of different human cell lines treated with 1018-K6 under phase-contrast microscope. Embryonic (WI38) and fetal (TIG3) lung fibroblastic cell lines were incubated at 37 °C for 24 h in absence (CTRL) or in presence (Treated) of 1018-K6 (10 μ M). The microscope images are representative of three independent experiments performed in triplicate. Bar is equal 100 μ m.
