

S6 Table. Scores, specificity, sensitivity and Youden index corresponding to rescue analgesia indication of the USAPS and unidimensional scales (A); 95% confidence intervals of 1,001 replications and of sensitivity and specificity >0.90 applied to estimate the diagnostic uncertainty zone of the cut-off point of each scale, according to the Youden index (B).

USAPS: Unesp-Botucatu sheep acute composite pain scale; NS – numerical; SDS - simple descriptive; VAS - visual analogue; Sp- Specificity; S - Sensitivity; YI - Youden Index; CI - confidence interval; CI > 0.90 - CI of specificity and sensitivity > 0.90. AUC - area under the curve; Est - estimated; Min - minimum; Max – maximum; Values in bold are in the same line of the cut-off point for each scale (A) and estimated values (B).
