

eFigure 4. Representative ultrawide field fluorescein angiographic images from a patient with significant improvement in vascular leakage after aflibercept therapy. The study eyes (A; baseline, B; 6-months, C; 12-months) showed significant improvements in vascular leakage after six aflibercept injections compared with untreated fellow eyes (D; baseline, E; 6-months, F; 12-months). (A) Vascular leakage at baseline: 0.324 (B) Vascular leakage at 6-months: 0.163 (C) Vascular leakage at 12-months: 0.265, (D) Vascular leakage at baseline: 0.204 (E) Vascular leakage at 6-months: 0.198 (F) Vascular leakage at 12-months: 0.187.
