

Supplementary Box 1: Medication Categories by AHFS Drug Classes

Antidepressants

- 28:16.04.12 Monoamine Oxidase Inhibitors
- 28:16.04.16 Selective Serotonin and Norepinephrine Reuptake Inhibitors
- 28:16.04.20 Selective-Serotonin Reuptake Inhibitors
- 28:16.04.24 Serotonin Modulators
- 28:16.04.28 Tricyclics and Other Norepinephrine-Reuptake Inhibitors
- 28:16.04.92 Antidepressants, Miscellaneous

Anxiolytics, Sedatives, Hypnotics

- 28:12.04 Barbiturates, Anticonvulsants
- 28:12.08 Benzodiazepines, Anticonvulsants
- 28:24.04 Barbiturates
- 28:24.08 Benzodiazepines
- 28:24.92 Anxiolytics, Sedatives, and Hypnotics, Miscellaneous

Anticonvulsants

- 28:12.04 Barbiturates, Anticonvulsants
- 28:12.08 Benzodiazepines, Anticonvulsants
- 28:12.92 Anticonvulsants, Miscellaneous
- 28:12.20 Succinimides
- 28:12.12 Hydantoins

Non-Opioid Analgesics

- 28:08.04.08 Cyclooxygenase-2 (COX-2) Inhibitors
- 28:08.04.92 Other Nonsteroidal Anti-inflammatory Agents
- 28:08.04.24 Salicylates
- 28:08.92 Analgesics and Antipyretics, Miscellaneous
- 28:32.28 Selective Serotonin Agonists

Opioids

- 28:08.08 Opiate Agonists
- 28:08.12 Opiate Partial Agonists
- 28:10 Opiate Antagonists

Muscle Relaxants

- 12:20.04 Centrally Acting Skeletal Muscle Relaxants
- 12:20.08 Direct-acting Skeletal Muscle Relaxants
- 12:20.12 GABA-derivative Skeletal Muscle Relaxants
- 12:20.20 Neuromuscular Blocking Agents
- 12:20.92 Skeletal Muscle Relaxants, Miscellaneous

Neuroleptics

- 28:16.08.04 Atypical Antipsychotics
- 28:16.08.08 Butyrophenones
- 28:16.08.24 Phenothiazines
- 28:16.08.32 Thioxanthenes
- 28:16.08.92 Antipsychotics, Miscellaneous
- 28:28 Antimanic Agents

Stimulants

- 28:20.92 Anorexigenic Agents and Respiratory and Cerebral Stimulants, Miscellaneous
- 28:20.04 Amphetamines
- 28:92 Central Nervous System Agents, Miscellaneous
- 24:08.16 Central Alpha-Agonists (for clonidine and guanfacine)
- 28:20.80 Wakefulness-promoting Agents (for Armodafinil)

† The demographics, treatment characteristics, psychoactive drug use at adolescence and behavior functioning (BPI) were compared between survivors who completed self-evaluation of adult functional outcomes at longitudinal follow-up *versus* survivors who did not complete self-evaluation. All statistical estimates from the data, including percentages, were calculated with sampling weights to account for under-sampling of survivors of acute lymphoblastic leukemia diagnosed from 1987-1999.

* Presented as median (interquartile range)

Supplementary Table 2: Comparison of Psychoactive Medication Use in Survivors vs Sibling Controls

Use of psychoactive medications	Survivors (N=5665)	Siblings (N=921)	
	(%)	(%)	RR (95%CI)
Any psychoactive medication	1037 (18.3)	61 (6.6)	2.97 (2.27- 3.89)
By each medication class:			
Antidepressants	184 (3.2)	13 (1.4)	2.64 (1.42- 4.92)
Anxiolytics/sedatives/hypnotics	73 (1.3)	1 (0.1)	*

† Percentages calculated on total number of participants for whom data was available and weighted to reflect modified sampling of survivors in expansion cohort.

* Persistent users: Survivors with reported use of psychoactive medication at both adolescence and young adulthood

‡ New-onset users: Survivors with no reported use of psychoactive medication at adolescence but reported use at young adulthood

§ Former users: Survivors with reported use of psychoactive medication at adolescence but did not report use at young adulthood

†† Non-users: Survivors with no reported use of psychoactive medication at both adolescence and young adulthood

† This analysis on social attainment was conducted in the subgroup of survivors who were above the age of 25 years old during the follow-up surveys

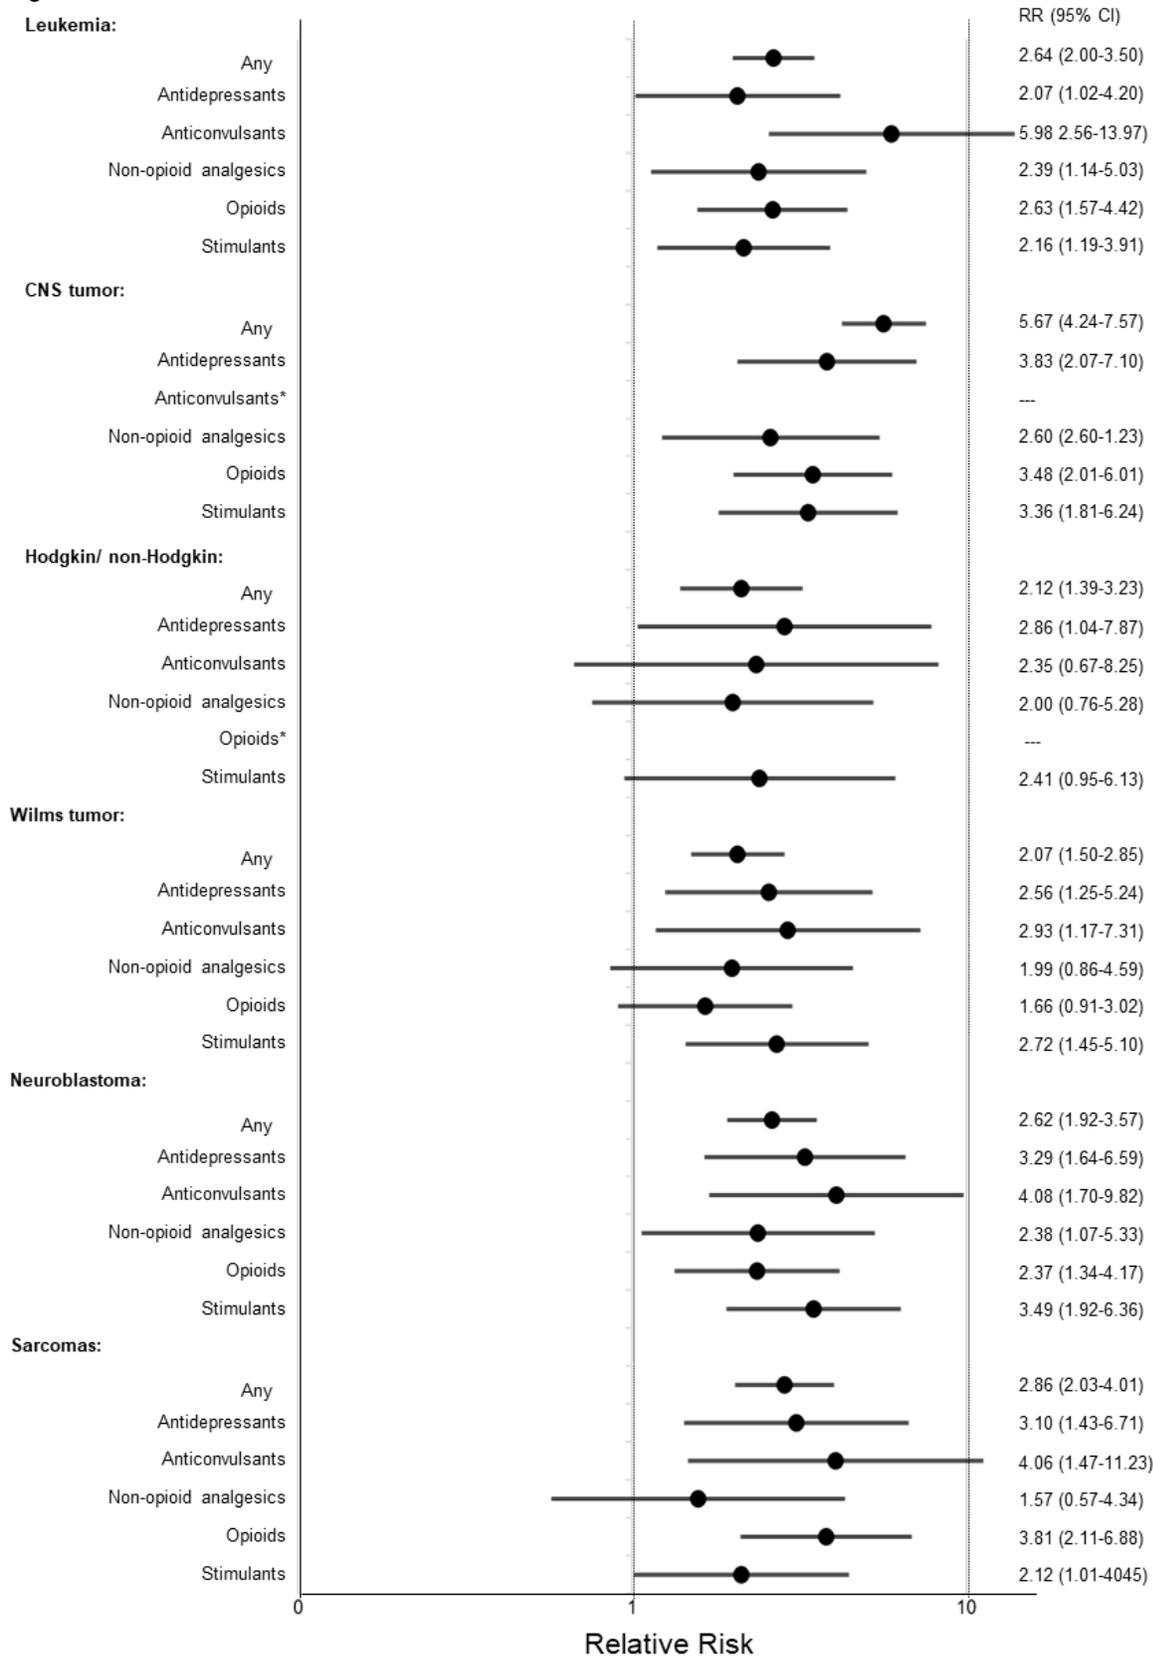

* Relative risks (RRs) and 95% confidence intervals (CIs) from multivariable models adjusted for sex, age and race, socioeconomic status, intravenous and intrathecal methotrexate doses, and cranial radiation dose

‡ Risk comparisons were not conducted for Muscle Relaxants to limited sample size.

Supplementary Figure 1: Flow Diagram of Study participation of Survivors from the Childhood Cancer Survivor Study

Supplementary Figure 2: Comparison of Psychoactive Medication Use in Survivors vs Sibling Controls by Diagnoses

Each dot and whisker represents the relative risk (RR) estimate and 95% confidence interval (CI), respectively, on a logarithmic scale.

Models are adjusted for sex, age and race

The sarcoma group includes osteosarcoma and other soft tissue sarcomas

Risk comparisons were not conducted for Anxiolytics/Sedatives/Hypnotics, Muscle Relaxants and Neuroleptics for all diagnoses due to limited sample size within the sibling group.

*Risk comparison was not presented graphically for Anticonvulsants within the CNS tumor group due to the large and unstable estimate (RR=30.0, 95%=13.4-67.5) obtained from the small number of individuals on psychoactive medication in the sibling group.

*Risk comparison was not conducted for Opioids within the Hodgkin and non-Hodgkin disease group due to limited sample size within the sibling group.
