

SUPPLEMENTAL FIGURE LEGEND

Supplementary Figure 1: Ad-FIR suppresses both cyclinE and P27 expression in HeLa cells

HeLa cells were transfected with Ad-FIR or Ad-FIR Δ exon2, and after 48 h of incubation, the whole-cell proteins were extracted and the expression of protein was determined by Western blotting. Mock; no treatment, Ad-GFP; control, Ad-FIR and Ad-FIR Δ exon2 treatment at 2.5 MOI.
