

Supplementary figure legends.

Supplementary video 1: Animated projection of RSV IBs. MDBK cells infected with bRSV; nine Z-section images, 0.9 μm apart, taken through the cell to allow quantification of N positive puncta were concatenated in the Image J software to generate this animation.

Supplementary video 2: A 3D projection of RSV IBs. The concatenated z-stack imaging from supplementary video 1 were used to generate a 3D projection of RSV IBs, with 1 pixel spacers added between adjacent z-stacks to achieve the required 3D effect. The projection was performed in Image J software.
