

Supplemental Fig S8. H3K9ac profiles around DE poly(A) sites. Means of H3K9ac levels at each nucleotide position from -1000 bp to 1000 bp around poly(A) sites are plotted. Black dots in boxplot indicate mean values. The Wilcoxon signed-rank test was used to test difference across different groups, and p values are listed in Supplemental Table S6. A and B, H3K9ac profiles of DE, up-regulated and *hda6* unique poly(A) sites. C and D, H3K9ac profiles of non-DE, down-regulated and Col-0 unique poly(A) sites.
