

a

Before detergent treated

b

Treated with 0.8% Tween-100

Supplementary information, Fig. S1| CryoEM micrographs of EBV virion.

a A representative image recorded with a 200 kV Talos Arctica microscope, showing intact EBV virions before the detergent treatment.

b A representative image recorded with 300 kV Titan Krios microscope, showing that the viral envelopes were removed or partially solubilized by detergent treatment.
