

Drugs inhibiting TMEM16 proteins block SARS-CoV-2 Spike-induced syncytia

*L. Braga, H. Ali et al.*

#### SUPPLEMENTARY INFORMATION GUIDE

**Supplementary Information Table 1. Results of the screenings with drugs from the Prestwick Chemical Library (left) and Spectrum Collection (right) using the Cell Fusion Inhibition Assay (CFIA).** Red: z score <-2.58 or >2.58. Blue: z score from <-1.96 to -2.58 or from >1.96 to 2.58.

**Supplementary Information Table 2. Results of the screenings with drugs from the Prestwick Chemical Library (left) and Spectrum Collection (right) using the Syncytium Inhibition Assay (SIA).** Red: z score <-2.58 or >2.58. Blue: z score from <-1.96 to -2.58 or from >1.96 to 2.58. Note that 4-hydroxychalcone is duplicated in the library MS Discovery Spectrum Collection library.

**Supplementary Information Table 3. List of primers used in the study**

**Supplementary Information Figure 1.** Original blots relative to Extended Data Figs. 7b and 8b and 8c. Boxes with red dotted lines are the regions used in the figures.

**Supplementary Video 1. Heterologous cell fusion.** Twelve-hr time lapse imaging of co-cultures of human U2OS cells transfected with a control plasmid (left) or with pEC117-Spike-V5, expressing SARS-CoV-2 S protein (right), together with Vero cells expressing EGFP. At the end of the imaging period, cells were fixed and nuclei were counterstained with DAPI.

**Supplementary Videos 2 and 3. Formation of syncytia.** Twelve-hr time lapse imaging of Vero cells transfected with GCaMP6s (green), showing progressive cell fusion and formation of syncytia.

**Supplementary Video 4. Calcium oscillations in cells undergoing fusion.** Time-lapse imaging of 12-hr co-cultures of Vero cells expressing the GCaMP6s Ca<sup>2+</sup> sensor with U2OS cells expressing Spike and mCherry. Spike-mediated fusion events correlated with numerous oscillations in intracellular Ca<sup>2+</sup> levels. Individual frames from this movie are in **Fig. 2b**.

**Supplementary Video 5. Effect of syncytia-inhibiting drugs on Ca<sup>2+</sup> oscillations.** Time-lapse imaging of Vero cells expressing the GCaMP6s Ca<sup>2+</sup> sensor in the presence of the indicated drugs (1  $\mu$ M Niclosamide and 5  $\mu$ M Clofazimine and Salinomycin) or of DMSO Control. A reduction in Ca<sup>2+</sup> transients is evident with Niclosamide and Clofazimine. Quantification of this Ca<sup>2+</sup> activity is in **Fig. 2d**. Individual frames from the movie with DMSO (Control) are in **Fig. 2c**.

**Supplementary Video 6. Effect of Calcium depletion and SERCA inhibition on Ca<sup>2+</sup> oscillations.**

Time-lapse imaging of Vero cells co-expressing the GCaMP6s Ca<sup>2+</sup> sensor and either an empty vector (Control) or Spike. Cells were cultured in normal medium (upper panels), medium without Ca<sup>2+</sup>, or normal medium supplemented with the SERCA inhibitors thapsigargin (TG) or cyclopiazonic acid (CPA). A reduction in Ca<sup>2+</sup> transients is evident in all the three treatments. Quantification of this Ca<sup>2+</sup> activity is in **Extended Data Figs. 6c and 6d**.

**Supplementary Information Table 1 - Results of the screenings with drugs from the Prestwick Chemical Library (left) and Spectrum Collection (right) using the Cell Fusion Inhibition Assay (CFIA). Red: z score <-2.58 or >2.58. Blue: z score from <-1.96 to -2.58 or from >1.96**

VERAPAMIL HYDROCHLORIDE	152-11-4, 52-53-9 [verapamil]	
VINBLASTINE SULFATE	143-67-9, 865-21-4 [vinblastine]	
VORINOSTAT	149647-78-9	
VORTIOXETINE HYDROBROMIDE	508233-74-7	
ZALEPLON	151319-34-5	
ZILEUTON	111406-87-2	
ZINC UNDECYLENATE [4mM]	557-08-4	
ZOLMITRIPTAN	139264-17-8	

**Supplementary Information Table 3. List of primers used in the study.**
