Supplementary Figure 1. Enriched inflammatory pathways characterize Tregs in advanced melanoma individuals developing irAEs. (A) Frequencies of CD4⁺CD25⁺CD127⁻ Foxp3⁺ Tregs in peripheral blood of individuals with advanced melanoma under anti-PD1: without irAEs (Mel-ctrl, n=11) and with irAEs (Mel-irAEs, n=9). For **B-D**, transcriptomic analysis of CD4⁺CD25⁺CD127⁻ Tregs isolated from blood of advanced melanoma patients under anti-PD1 treatment. (B) Heatmap of DEGs of 'Mel-ctrl (n=15) vs Mel-irAEs (n=11)'. (C) Heatmap of DEGs from melanoma individuals 'ORR-ctrl (n=3) vs ORR-irAEs (n=4)' (upper panel); and GSEA analysis showing the positively enriched gene-sets (FDR<0.25; lower panel); Objective Response Rate (ORR) is defined as the proportion of patients with a complete or a partial response to therapy. (D) Upstream regulator network (left) and barplot (right) from the DEGs of 'Mel-ctrl vs Mel-irAEs' using IPA analysis; red represents activation in Mel-irAEs; green represents inactivation in Mel-irAEs; IPA activation z-score is to infer the activation states of predicted transcriptional regulators.

Supplementary Figure 2. Distinct pro-inflammatory transcriptomic profile of irAEs Tregs among different type of cancers. (A) Upstream regulator analysis from the DEGs of ‘CA-ctrl vs CA-irAEs’ treated anti-PD1 using IPA (IPA activation z-score is to infer the activation states of predicted transcriptional regulators). (B) Heatmap of DEGs in Tregs isolated from peripheral blood of ‘Healthy (n=14) vs CA-irAEs (n=11)’.

Supplementary Table 1

	ID	Disease	Sex	Age	Treatment	irAEs	Adjuvant/Metastatic	Response to ICI
Autoimmune	A1	HT	M	55	Levothyroxine	N/A	N/A	N/A

HT: Hashimoto Thyroiditis, RA: Rheumatoid Arthritis, UC: Ulcerative Colitis, CD: Crohn's Disease,
NSCL: Non Small Cell Lung, CA: Cancer, F: Female, M: Male
HCQ: hydroxychloroquine, PZ: Prednisone, AZA: Azathioprine, MTx: Methotrexate
SD: stable disease, PR: partial remission, CR: complete remission, PD: progressive disease

Supplementary Table 1. Demographic and clinical characteristics of human subjects.

Characteristics of human subjects recruited for the study. Individuals with Autoimmunity (n = 20),
Melanoma irAEs (n = 11), Melanoma Control (n = 15), Cancer irAEs (n = 11) and Cancer control (n=5).
