

Supplementary Figure S5. Quantification of YAP localization in esophageal cell lines.

A, Immunolocalization of YAP in esophageal cell lines after 24 hours treatment with indicated compounds. **B**, Quantification of nuclear YAP fluorescence intensity. **C**, Quantification of esophageal cell growth, as measured by nuclei counts, following treatment with compound for 24 hours. Values in **B** and **C** are normalized to DMSO and displayed as mean \pm SEM ($n = 3$ independent experiments). Statistical significance was assessed by one-way ANOVA. NS, not significant, *, $P < 0.05$. Scale bar, 50 μm .
