

643 **Figure S1** Related to Figure 1. (A) Targeting strategy for introducing the mKO2 reporter at the
644 *Hoxb5* locus (*Hoxb5* mKO2). (B) Representative flow cytometry gating of BM cells to isolate LK,
645 LSK, HSC, MPP, HPC-1 and HPC-2 populations. (C) Representative histograms from WT and
646 *Hoxb5* mKO2 mice showing mKO2 expression in CD150⁻ and CD150⁺ fractions. (D) *Hoxb5*

647 expression for cell types gated in B is shown by bar graph with mean % of Hoxb5⁺ cells \pm SEM,
648 and representative contour plots with outliers. mKO2⁺ cells were measured after comparison to
649 wild-type control mice (top row), used as fluorescence minus one (FMO) and for logical exclusion
650 of autofluorescence. Results are from 15 Hoxb5 mKO2 mice at 8-12 weeks old. (E) Percentage of
651 CD45.2⁺ cells in the BM HSC compartment of primary recipient mice 16 weeks after
652 transplantation of Hoxb5⁺ or Hoxb5⁻ HSCs, see also Figure E1B-C * $P \leq 0.05$, unpaired, two-tailed
653 Student's t-test. (F) Representative flow cytometry gates used for isolation of HSPC
654 subpopulations and Tom⁺ cells from mouse BM. Tom labelling (red) is shown in each population
655 compared to control cells (blue). FACS plots correspond to mouse analysed 3 months after label
656 induction. Relevant to Figure 1B-E. (G) Fractions of Tom⁺ cells in the HSPC populations at each
657 analysed time point. All data represent mean \pm SEM; * $P < 0.05$, ** $P < 0.01$, *** $P < 0.001$ and **** P
658 < 0.0001 (one-way ANOVA with post hoc Tukey's multiple comparisons test against all groups).
659 (H) Fractions of Tom⁺ cells in the BM, thymus, spleen and lymph nodes analyzed at the indicated
660 time-points after label induction. Shown as mean with error bars denoting SEM of 4-32 animals.

661 **Figure S2** Related to Figure 2. (A) UMAP projection of the integrated HSPC scRNA-Seq
662 landscape (all Tom⁺ and Tom⁻ combined) with log-normalized expression for chosen marker genes
663 in red. (B) Projection from A with inferred cell cycle phases. (C) Projection from A showing the
664 HSC-score, metric correlated with the highest HSC repopulation potential. (D) Projection from A
665 showing inferred diffusion pseudotime values for each cell. (E) Projection from A color-coded by
666 scRNA-Seq technology used, SS2 - Smart-Seq2, 10x - 10x Genomics 3' Kit. (F) UMAP projection
667 of the integrated scRNA-Seq landscape (all Tom⁺ and Tom⁻ cells combined) prior to filtering out
668 outlier/aberrant clusters with color-coded cluster information. After filtering cluster were
669 renumbered in consecutive order. (G) Projection from F with color-coded manual annotation.

670 Abbreviations: B prog - B cell progenitor, Bas - basophils, Bas/MC prog - Basophil and Mast Cell
671 progenitors, DC prog - dendritic cell progenitors, Eos - eosinophils, Ery prog - erythroid
672 progenitors, HSC - hematopoietic stem cells, Hi-Mito - cluster characterized by high mitochondrial
673 gene expression (potentially dying cells), ILC - innate lymphoid cells, Ifn-act prog - progenitors
674 with strongly activated Interferon signature, Int prog - intermediate progenitors, Ly prog -
675 lymphoid progenitors, Meg prog - megakaryocyte progenitors, Mono/DC prog - monocyte and

676 dendritic cells progenitors, Myo C1 - myeloid cells with high expression of complement genes,
677 Neu prog - neutrophil progenitors, pDC - plasmacytoid dendritic cells

678 **Figure S3** Related to Figure 2. (A) UMAP projection of the integrated HSPC landscape (grey)
679 with embedded immunophenotypic sub-populations (blue) from Nestorowa et al.⁷ (B) Fraction of
680 cells in each immunophenotypic population from A assigned to the HSPC landscape clusters. (C)
681 UMAP projection of the integrated HSPC landscape (grey) with embedded cells from Weinreb et
682 al.¹¹ split by their progeny fate.

683 **Figure S4** Related to Figure 2. (A) Projection from A comparing the relative abundance between
684 labelled and unlabelled cells within each time-point. Each cluster is color-coded according to its
685 log₂-transformed ratio between Tom⁺ and Tom⁻ cell numbers (average of all replicates per time-
686 point). Red indicates enrichment, white the expected value and blue depletion. For reference the
687 cluster boundaries are visualized in the bottom right panel. (B) UMAP projection of the integrated
688 scRNA-Seq landscape (all Tom⁺ and Tom⁻ combined) in grey with Tom⁻ cells harvested at 269
689 days in blue.

690 **Figure S5** Related to Figure 3. (A) Best discrete model fit (with 95% confidence intervals) for
691 number of Tom⁺ cells in cluster 0. (B) Best discrete model fit (with 95% confidence intervals) for
692 cluster 0 size. (C) Best discrete model fit for sub-cluster sizes within cluster 0. Error bars indicate
693 pooled standard error of the mean. (D) Total number of cells per mouse in the indicated populations
694 normalized to the first time-point. Based on flow cytometry data from Barile et al.²². Error bars
695 indicate pooled standard error of the mean. (E) UMAP projection of the isolated cluster 0 from the
696 HSPC landscape, colour-coded by subclusters. (F) Violin plots of HSCscore or Procr/Ly6a
697 expression grouped per subcluster from E. (G) Relative observed size of subclusters from E
698 compared with the model best fit and bounds for cluster 0a. (H,I) Observed labelling frequency in
699 subclusters from E: 8 -with highest HSC-score and HSC marker expression and 12 – with
700 intermediate HSC-score but highest Ly6a expression. Data compared with the best fit and bounds
701 for cluster 0a from the HSPC discrete dynamics model.

702 **Figure S6** Related to Figure 3. (A) UMAP projection of the integrated landscape color-coded by
703 log-normalized expression of indicated JAK/STAT target genes⁷². (B,C) Relative cluster size
704 (normalized to cluster 0, based on Tom⁻ cells) with the best fit for the main model (only one phase)

705 and bi-phasic model, which permits a change in proliferation and differentiation rates after day 27.
706 Error bars indicate pooled standard error of the mean. (D) Proliferation rates per cluster for each
707 phase of the bi-phasic model. Phase I includes the first four time-points and phase II the remaining
708 ones. Error bars indicate 95% confidence interval. (E) Differentiation rates per transition for each
709 phase of the bi-phasic model. Phase I includes the first four time-points and phase II the remaining
710 ones. Error bars indicate 95% confidence interval. (F) Graph abstraction view of the dynamics
711 model. Size of the nodes is proportional to square roots of relative cluster size, node color is
712 proportional to net proliferation rate, arrows indicate differentiation directions, arrow thickness is
713 proportional to cell differentiation rate (log-scale). (G) Scatter plot showing relation of cluster
714 connectivity (estimated by PAGA) to differentiation rates. Only clusters 0-12 and differentiation
715 rates greater than 10^{-12} are shown. Please note that in the case of the transitions between clusters 4
716 and 8 two differentiation rates are plotted (each direction). Blue line indicates linear model fit with
717 shaded 95% confidence interval. (H) Related to Figure 3F, the average time required for a single
718 cell to accumulate in the corresponding cluster when initiated in cluster 0 (journey time).

719 **Figure S7** Related to Figure 5. (A) HSPC dynamics discrete model prediction of labelled cells
720 relative to cluster 0 based on the initial labelling from the Pdzk1ip1-Tom *in vivo* mouse model
721 data⁴³. Please note that this dataset contains a limited number of cells, in particular clusters 14, 17,
722 18, 19 contain less than 10 cells across all time-points. (B) Predicted relative cluster size (red line
723 with 95% confidence interval) based on day 3 data from Dong et al.⁴⁴. Observed data shown in
724 blue (please note that this dataset contains a limited number of cells). Error bars indicate
725 propagated standard error of the mean.

726 **Supplementary tables legends**

727 **Table S1. Details of the manual annotation of the integrated HSPC landscape.** Table contains
728 the manual annotation for each cluster, indication whether the cluster was filtered out and lists of
729 key marker genes used in the annotation process.

730 **Table S2. Discrete model input data.** Tables of observed cell numbers per cluster for Tom⁺ and
731 Tom⁻ populations with the following columns: biosample_id - a unique sample and mouse
732 identifier, cluster numbers, total_cells_flow - total number of cells captured in the Lin⁻, (Sca1 OR

733 cKit)⁺ flow cytometry gates, total_cells_sc - total number of cells observed in single-cell data,
734 total_cells_sc_filtered - total number of cells observed in single-cell data for filtered clusters,
735 time_days - timepoint.

736 **Table S3. Discrete model parameters.** Tables containing estimates for the main discrete model
737 and bi-phasic model parameters. Transition column indicates the direction of specific
738 differentiation rates between clusters, start/stop columns indicate pre-defined maximum/minimum
739 values for the parameter, upper and lower bounds correspond to 95% intervals.

740 **Table S4. Continuous model parameters.** Tables containing continuous model parameter
741 estimates per cell, cellid correspond to unique cell identifier matching the deposited scRNA-Seq
742 data.

743 **Table S5. Dynamically expressed genes per trajectory.** Tables containing differential
744 expression statistics for genes with dynamic expression around the pseudotime ranges indicated in
745 Figures 4 and E9,E10 corresponding to changes in differentiation rates or net proliferation rates.
746 logFC - log₂(Fold Change) within the indicated range.

747 **Table S6. Number of cells from the Upadhaya et al.⁴³ data.** Observed in each cluster of the
748 HSPC model present in this work.

749 **Table S7. Oligonucleotide sequences.** Table containing DNA sequences of the oligonucleotides
750 used in this work.

751

752 **STAR Methods**

753 **Lead contact**

754 Further information and requests for resources and reagents should be directed to and will be
755 fulfilled by the lead contact, Berthold Göttgens (bg200@cam.ac.uk)

756 **Materials availability**

757 Plasmids and mouse lines generated in this work are available upon request.
