

Figure S1. Effects of SH-5 (AKT inhibitor) on miR-138 expression in U87 and U251 glioma cells. U87 and U251 cells ($n \geq 3$) were pre-treated with SH-5 ($10 \mu\text{M}$) for 2 h and miR-138 expression was measured by RT-qPCR analysis. The results indicated that the expression level of miR-138 in U87 and U251 cells did not change following SH-5 treatment.
