

Figure S1. miR-7 combined with irradiation decreases clone formation. Clone formation assays demonstrated that miR-7 combined with irradiation markedly inhibited the clone formation of A549 cells. miR-7, microRNA-7.

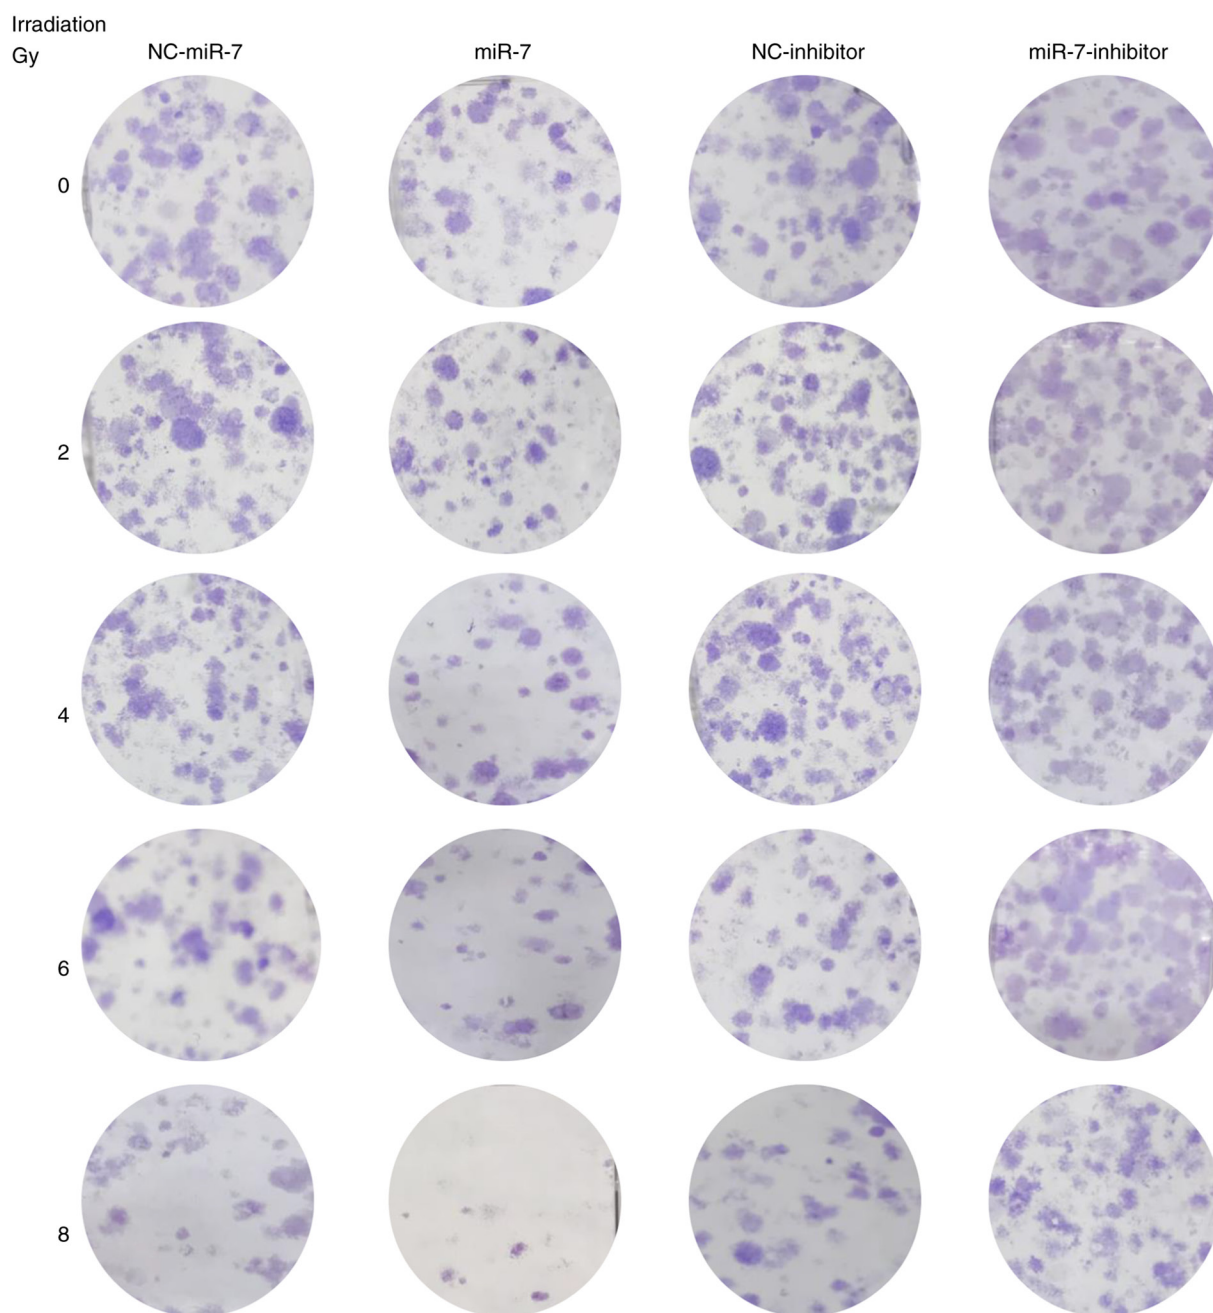

Figure S2. sh-SP1 combined with irradiation decreases clone formation. Clone formation assays demonstrated that sh-SP1 combined with irradiation markedly inhibited the clone formation of A549 cells. SP1, specific protein 1; sh, shRNA.
