

Additional file 4. Vascular density was not changed with ageing and AD progression

a. Comparison of vascular density. No significant difference was observed (interaction, $p = 0.2455$; age, $p = 0.2014$; genotype, $p = 0.1666$) (all groups $n = 4$). **b.** Representative images of cortical vascular density. Scale bar = $100\mu\text{m}$. All data are presented as the mean \pm SEM.
