**Table S4 Quality assessment of included of studies by Critical Appraisal Skills Programme (CASP) scales.**

| Study, Year     | 1.Did the study address a focused issue? | 2.Was the cohort recruited clearly and in an acceptable way? | 3.Was exposure to confounding bias minimized? | 4.Was the outcome clearly measured? | 5. (a) Have the authors identified all important confounding factors? | 5. (b) Have they taken account of confounding factors? | 6. (a) Was follow up complete enough? | 6. (b) Was follow up of this subject long enough? | 7. What are the results? | 8. How precise are the results? | 9. Do you believe the results? | 10.Can the results be applied to the local population? | 11. Do the results fit with other studies? | 12.What are the implications of this study for practice? |
