ON-LINE FIGURE. Coronal representation of average brain activation maps of the healthy control group (**A**) and the traumatic anosmia group (**B**) in response to the citral stimuli (1-sample t test, voxelwise threshold false discovery rate–corrected $P < .05$) (t values in a color scale). The traumatic anosmia group shows more widespread activation in the orbitofrontal cortex, insula, and multiple bilateral cortical association areas than the healthy control group. The left side of the brain is presented on the left side of the image, according to neurologic convention.

On-line Table 1: Differences in olfaction-induced brain activation between patients with traumatic anosmia and healthy control subjects

Stimulation/Area	MNI Coordinates			Activation Size (Voxels)	T Value
