DeepciRGO: Functional prediction of circular RNAs based on the heterogeneous networks

Lei Deng , Wei Lin , Jiacheng Wang and Jingpu Zhang

1 Experimental result

When we manually annotated independent test data sets (circRNA2GO-62), we found that circRNA's functions in cells were mostly biological processes (BP), and only a small part were cellular components (CC) and molecular functions (MF). So, in order to better evaluate our model, we only did comparative experiments on biological processes. Given a target circRNA, the candidate GO terms are predicted and ranked by DeepciRGO. In order to compare whether the predicted GO terms are consistent with the circRNA function confirmed by experiments, we sorted the predicted GO according to the predicted score and evaluated the top 20 GO terms of BP.

1.1 Case study:CircMYLK

CircMYLK, also known as hsa_circ_0002768, is spliced from the MYLK gene [1]. By screening circRNA expression profiles, Zhong et al. found that the circMYLK levels were significantly increased in bladder cancer tissue samples than in matched normal bladder tissue samples and that the circMYLK levels were correlated with bladder cancer stage [2]. In bladder cancer cells studied in vitro, upregulation of circMYLK enhanced tumor cell growth, migration and apoptotic process[3], whereas circMYLK knockdown resulted in the opposite effects. In vivo studies showed that circMYLK upregulation promoted the growth of xenograft tumors [2]. Further studies have shown that circMYLK regulates the expression of vascular endothelial growth factor A (VEGFA), induces epithelial–mesenchymal transition (EMT), and activates Ras/ERK signaling [2].

CircMYLK are annotated with 64 GO terms of biological process in total through DeepciRGO. The top 20 GO terms assigned to the CircMYLK are shown in Table S1. For biological process, most terms are involved in the regulation of cell migration, cell growth, vasculature development as well as regulation of gene expression. such as GO:0030336 (negative regulation of cell migration), GO:0030307 (positive regulation of cell growth), GO:0040008 (regulation of growth), GO:1901342 (regulation of vasculature development). The predicted function of CircMYLK by DeepciRGO is basically consistent with the experimental results supported by the references.

Table S1. The top 20 predicted BP functions for CircMYLK (namely hsa_circ_0002768), which annotated with 64 GO terms of biological process in total by DeepciRGO.

rank	GO term	GO name
------	---------	---------

1	GO:1902589	organelle organization
2	GO:0043065	positive regulation of apoptotic process
3	GO:0016043	cellular component organization
4	GO:0071840	Cellular component organization or biogenesis
5	GO:0010468	regulation of gene expression
6	GO:0010556	regulation of macromolecule biosynthetic process
7	GO:0008285	negative regulation of cell population proliferation
8	GO:0009966	regulation of signal transduction
9	GO:0030336	negative regulation of cell migration
10	GO:0032268	regulation of cellular protein metabolic process
11	GO:0051246	regulation of protein metabolic process
12	GO:0032268	regulation of cellular protein metabolic process
13	GO:0031326	regulation of cellular biosynthetic process
14	GO:1901342	regulation of vasculature development
15	GO:0035821	modification of morphology or physiology of other organism
16	GO:0051047	positive regulation of secretion
17	GO:1903532	positive regulation of secretion by cell
18	GO:0030307	positive regulation of cell growth
19	GO:0045927	positive regulation of growth
20	GO:0040008	regulation of growth

1.2 Case study:circZNF609

Studies have shown that circZNF609 could be translated into a protein, which was involved in controlling myoblast proliferation.[4] Meanwhile, circZNF609 increased oncogene p70S6K1 expression by sponging and sequestering miR-145-5p activity. Moreover, ectopic expression of miR-145-5p or silencing of p70S6K1 could effectively reverse circZNF609-induced promotion of breast cancer proliferation, migration, and invasion.[5] cZNF609 silencing decreased retinal vessel loss and suppressed pathological angiogenesis in vivo. cZNF609 silencing increased endothelial cell migration and tube formation, and protected endothelial cell against oxidative stress and hypoxia stress in vitro.[6]

In our study, circZNF609 are annotated with 48 GO terms of biological process in total through DeepciRGO. The top 20 GO terms assigned to the circZNF609 are shown in Table S2. For biological process, most terms are involved in the regulation of cell migration, cell growth and vasculature development. such as GO:0030335 (positive regulation of cell migration), GO:0030307 (positive regulation of cell growth), GO:0045927 (positive regulation of growth), GO:0040008 (regulation of growth), GO:1901342 (regulation of vasculature development). These data also show that the predicted circRNA functions of our model are basically consistent with those confirmed by experimental studies.

Table S2. The top 20 predicted BP functions for circZNF609 (namely hsa_circ_0000615), which annotated with 48 GO terms of biological process in total by DeepciRGO.

Rank	GO term	GO name
1	GO:0010628	positive regulation of gene expression
2	GO:0010604	positive regulation of macromolecule metabolic process
3	GO:0009893	positive regulation of metabolic process
4	GO:0071840	Cellular component organization or biogenesis
5	GO:0010468	regulation of gene expression
6	GO:0030335	positive regulation of cell migration
7	GO:2000147	positive regulation of cell motility
8	GO:0040017	positive regulation of locomotion
9	GO:0030336	negative regulation of cell migration
10	GO:0051272	positive regulation of cellular component movement
11	GO:0030307	positive regulation of cell growth
12	GO:0045927	positive regulation of growth
13	GO:0040008	regulation of growth
14	GO:0051093	negative regulation of developmental process
15	GO:0035821	modification of morphology or physiology of other organism
16	GO:1901342	regulation of vasculature development
17	GO:0051128	regulation of cellular component organization

18	GO:0050793	regulation of developmental process
19	GO:1903532	positive regulation of secretion by cell
20	GO:0051239	regulation of multicellular organismal process

2 Dataset

Since there is no available public database of lncRNA function annotations, we manually curate a independent test set of 62 circRNAs with 185 GO terms (named as circRNA2GO-62) based on references. Each annotation of circRNA2GO-62 is manually curated and contains referenced information about the circRNA, including sequences, genomic context, expression, subcellular localization, conservation, functional evidence and other relevant information.

Table S3. The independent test set of 62 circRNAs with 185 GO terms (named as circRNA2GO-62) based on references.
