

On-line Table: Patient characteristics

Patient	Sex	Age	Comorbidities	Neurologic Symptoms	Neuroimaging Findings	Location	Imaging	Follow-Up Imaging	Complications	Outcome
Posterior circulation ischemic/hemorrhagic event										
1	F	57	Aortic valve replacement	Psychomotor retardation, left gaze deviation, right superior and inferior limb paresis	Ischemic changes, left PCA occlusion	Bilateral occipital lobe and left cerebellum	CT, CTA, MR imaging	CT	Hemorrhagic evolution, spleen and kidney infarction	Clinical improvement, residual left lower limb paresis, discharged
2	M	78	Diabetes, hypertension	Confusion, aphasia	Ischemic changes, distal left PCA occlusion	Left thalamus, left temporal-occipital lobes	CT, CTA	CT	DVT	Clinical improvement, no motor deficit, discharged
3	M	88	AF, prior stroke, splenectomy, bowel carcinoma	Left inferior limb paresis and aphasia	Ischemic changes	Right mesial temporal and occipital lobes	CT	CT	Hemorrhagic evolution	Poor clinical recovery, discharged
4	F	73	Epilepsy (cryptogenetic) CKD, COPD, AF	Left central facial palsy, and bilateral upper limb leveling	Ischemic changes	Right thalamus	CT	CT	None	Clinical improvement, currently hospitalized
5	M	58	None	Coma	Ischemic changes	Right thalamus and occipital lobe	CT	NA	None	Death
6	F	64	Hypertension, AF	Drowsiness, reduction in visual acuity	Vasogenic edema and occipital hemorrhages (PRES), negative findings on CTA	Bilateral, posterior, frontal, parietal, temporal, and occipital lobes	CT, CTA, MR imaging	CT	None	Clinical improvement, currently hospitalized
7	F	84	Hypertension, diabetes, dyslipidemia, ovary carcinoma, TB	Aphasia, left hemiparesis	Hemorrhage, negative findings on CTA	Right parieto-occipital lobe	CT, CTA, MR imaging	CT	None	Clinical improvement, partial motor recovery, resolution of aphasia, discharged
