

Supplemental Figure for
 Source of ^{12}C in Calvin Benson cycle intermediates and isoprene emitted
 from plant leaves fed with $^{13}\text{CO}_2$

Thomas D. Sharkey, Alyssa L. Preiser, Sarathi M. Weraduwage, Linus Gog

Supplemental Figure 1. Replot of data of Szecowka et al. 2013 [1] from Supplemental Table 2 of that paper. Panel A shows data for Calvin Benson cycle intermediates ribulose 1,5 bisphosphate (RuBP), 3-phosphoglyceric acid (3-PGA), the pyruvate precursor 2-phosphoglyceric acid (2-PGA), Starch precursor ADP glucose (ADPG), the sucrose precursor UDP glucose (UDPG), plus free sucrose, fructose, and glucose. The values for RuBP, 3-PGA, 2-PGA, and ADP glucose were averaged and the degree of label was subtracted from 100%. This was plotted on a log scale (Panel B) to illustrate exponential decay.
