

Girard et al, Supplemental Figure 3

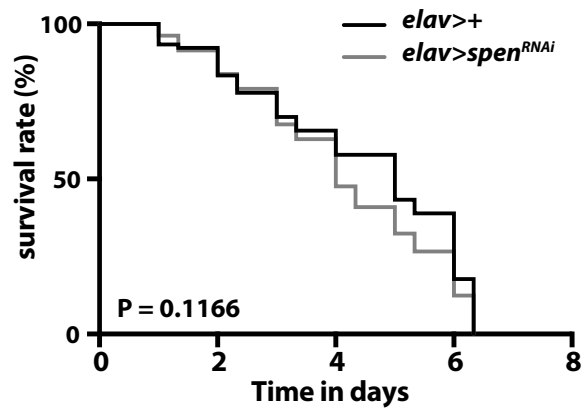

Figure S3. Knockdown of *spen* in neurons does not enhance the fly sensitivity to paraquat treatment.

Survival curves of adult male control flies (*elav-GAL4/+;*) or flies with glial cell-specific *spen* knockdown (*elav-GAL4 ;UAS-*spen*^{RNAi} /+;*) fed with 20 mM paraquat. The curves represent the sum of three independent experiments with each N=20 flies per genotype. P=0.1166, not significant, by the log-rank Mantel–Cox test.
