

Supplementary table 1: Frequency count (%) and test for Hardy–Weinberg equilibrium of $\epsilon 2$ and $\epsilon 4$ of the middle-age and elderly twins APOE genotypes

APOE genotypes							Total number	$\epsilon 2$ p-value*	$\epsilon 4$ p-value*
Study	$\epsilon 2\epsilon 2$	$\epsilon 2\epsilon 3$	$\epsilon 3\epsilon 3$	$\epsilon 2 \epsilon 4$	$\epsilon 3\epsilon 4$	$\epsilon 4\epsilon 4$			
Total	15 (0.5 %)	388 (13.2 %)	1610 (54.8 %)	83 (2.8 %)	752 (25.6 %)	88 (3.0 %)	2936	0.16	0.90

* Chi-square test for Hardy-Weinberg equilibrium
 APOE = apolipoprotein E
