

Supplementary Material

Astrocytic TSPO Upregulation Appears Before Microglial TSPO in Alzheimer's Disease

Supplementary Figure 1. A β deposits are predominant in the hippocampus in 12-month-old TgF344-AD. Examples of amyloid staining as detected by A4G8-ir in different regions of the brain (A) and the respective quantitative analysis (B). Amyloid staining was analyzed by one-way ANOVA. *Post hoc* tests indicate brain area differences ($\star\star$ $p < 0.01$). BRes., brain residue; Cer., cerebellum; Cx, cortex; FCx, frontal cortex; Hip, hippocampus; Stria., striatum. Scale bar: 200 μ m.
