

Supplementary Information

Vitamin D Metabolites and the Gut Microbiome in Older Men

Robert Thomas and Lingjing Jiang et al.

Supplementary Table 1. List of All Primers Used for Microbial DNA sequencing

The 16Sv4 rRNA was amplified using the 515F and 806R primers:

Read1: TATGGTAATTGTGTGCCAGCMGCCGCGTAA
 Index: ATTAGAWACCBBDGTAGTCCGGCTGACTGACT
 Read2: AGTCAGTCAGCCGGACTACHVGGGTWTCTAAT

Supplementary Table 2. Solvents, Gradients, Flows and Switching Schemes for 25(OH)D Method.

Table 1: Gradients, flows and solvents for the 25(OH)D method. Solvents coupled to the two Nexera XR LC-20ADxr (gradient pumps) were water containing 0.1% formic acid and pure methanol respectively. The solvents coupled to **LC-20AD** (loading pump) were a mixture of 60:40 (v/v) water:methanol and pure methanol. The gradient pumps generated flow over the analytical column in the loading phase and over loading and analytical column in series in the elution phase.

Time (min)	2x Nexera XR LC- 20ADxr		LC-20AD		Valves
	Methanol	Flow	Solvent	Flow	
0.00	Isocratic 79%	0.75 mL/min	60:40 (v/v) water:methanol	0.6 mL/min	Loading
0.70					Elution
0.70			methanol	1.0 mL/min	
1.40					
1.40					
2.90					
2.90	Isocratic 100%				Loading
4.50					
4.50	Isocratic 79%		60:40 (v/v) water:methanol	0.6 mL/min	
5.20					
5.20					
6.80					

Supplementary Table 3. Mass Transition Settings

	Q1 (m/z)	Q3 (m/z)	Mode	DT^a (msec)	DP^b (V)	CE^c (V)	CXP^d (V)
25(OH)D₃	383.2	211.1	APCI+	80	90	31	14
25(OH)D₃	383.2	229.1	APCI+	80	90	20	12
25(OH)D₂	395.2	211.1	APCI+	80	95	31	14
25(OH)D₂	395.2	269.3	APCI+	80	95	24	13
d6-25(OH)D₃	389.4	211.1	APCI+	80	90	31	14

^aDwell time, ^bDeclustering Potential, ^cCollision Energy, ^dCollision Cell Exit Potential

Supplementary Table 4. SAS Code used to create initial MrOS participant data set that was merged with the publicly available microbial sequencing data deposited in the European Bioinformatics Institute (EBI), accession number ERP 107984.
