

**Supplementary Note**

**Protein localization imaging of 335 individual clones isolated from the cell pool**

**Pooled protein tagging, cellular imaging and *in situ* sequencing for monitoring drug action in real time**

Pool of GFP-tagged cells  
(one sgRNA per cell, ~953  
different genes)

Single cell dilution

Imaging and NGS-based multiplex  
sgRNA amplicon sequencing  
(720 clonal cell lines)

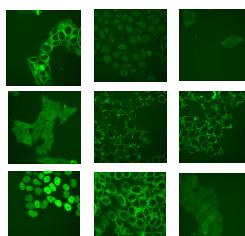

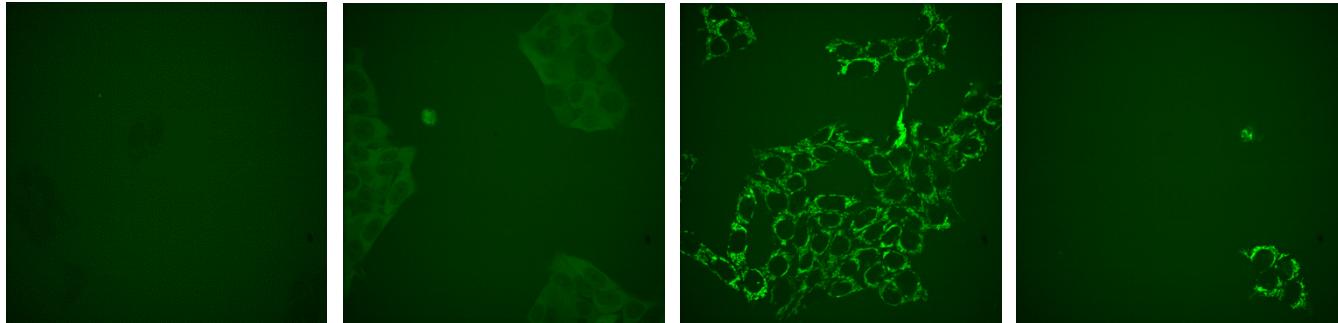

Clones excluded from  
further analysis:

- Confident annotation not possible due to no or very few sequencing reads in the corresponding well (182).
- Two or more sgRNAs detected in a single well due to multiple clones or clones expressing multiple sgRNAs (106).
- Sequencing reads, but no cells in any of the five fields of view that were imaged (58).
- No fluorescence detected in cells (39).

Comparison of the subcellular protein  
localization with annotations from  
The Human Protein Atlas  
(335 clonal cell lines)

Images of 335 clonal cell  
lines, covering 264 different  
introns of 212 proteins
