Supplementary table S2. The list of genes potentially involved into resistance to sunitinib identified by the screening.

Supplementary figure S1. Makhov et al.

Supplementary figure S1. Western blot analysis of indicated proteins in human embryonic kidney (T293) and ccRCC cell lines (786-O and PNX0010).

Supplementary figure S2. Makhov et al.

Supplementary figure S2. Validation of the efficacy of CRISPR-Cas9 mediated frameshift mutations upstream of CAAX motifs of indicated genes. Fragments of Sanger sequencing chromatograms of amplicons with sgRNA binding sites (underscored with red) are indicated. Mixed bases (merged individual peaks) occur directly within and downstream of 3' end of sgRNA binding sites.
